REC LITHIKKA D CSBS DEPT is presenting

RIVER GANGA :

We have seen the environment around us rejuvenate during the lockdown and animals at places where we would normally not expect them to be at. Not only have air pollution levels come down, but the water quality of the polluted rivers has also improved in India.

It has been reported that the quality of water in River Ganga has improved during the lockdown period as humans stay in quarantine, keeping the Ganga Ghats deserted. With the factories discharging toxic industrial waste into the river closed, certain stretches of the holy river in Uttar Pradesh have become cleaner. One-tenth of the source of pollution to the river is the industries. Regional diesel motor boats have also stopped. Limiting chemicals that go into the river has helped bring the water pollution levels down.
