

R.M.D. ENGINEERING COLLEGE (An Autonomous Institution) REGULATIONS 2021 CHOICE BASED CREDIT SYSTEM

B.Tech. INFORMATION TECHNOLOGY

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

- 1. To ensure graduates will be proficient in utilizing the fundamental knowledge of basic sciences, mathematics and Information Technology for the applications relevant to various streams of Engineering and Technology.
- 2. To enrich graduates with the core competencies necessary for applying knowledge of computers and telecommunications equipment to store, retrieve, transmit, manipulate and analyze data in the context of business enterprise.
- 3. To enable graduates to think logically, pursue lifelong learning and will have the capacity to understand technical issues related to computing systems and to design optimal solutions.
- 4. To enable graduates to develop hardware and software systems by understanding the importance of social, business and environmental needs in the human context.
- 5. To enable graduates to gain employment in organizations and establish themselves as professionals by applying their technical skills to solve real world problems and meet the diversified needs of industry, academia and research.

PROGRAM OUTCOMES (POs)

ENGINEERING GRADUATES WILL BE ABLE TO:

- 1. **Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- 2. **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- 3. **Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- 4. **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- 5. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

- 6. **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- 7. Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- 8. **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- 9. **Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- 10. **Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- 11. **Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- 12. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAM SPECIFIC OBJECTIVES (PSOs)

After the successful completion of the program, the graduates will be able to:

ுயாடி

- 1. To create, select, and apply appropriate techniques, resources, modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- 2. To manage complex IT projects with consideration of the human, financial, ethical and environmental factors and an understanding of risk management processes, and operational and policy implications.
- 3. Identify and utilize the strengths of current technologies in the hardware/support and mobile technology domains in implementing IT enabled services for societal needs.

- •

MAPPING OF PROGRAMME EDUCATIONAL OBJECTIVES WITH PROGRAMME OUTCOMES

A broad relation between the programme objective and the outcomes is given in the following table

PROGRAMME	PROGRAMME OUTCOMES (POs)											
OBJECTIVES (PEOs)	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
PEO1	3	2										2
PEO2	3	3	1	1								2
PEO3			3			1						3
PEO4			3		1	2	3	1				
PEO5				3				1	1	2	2	1

MAPPING OF PROGRAM SPECIFIC OBJECTIVES WITH PROGRAMME OUTCOMES

A broad relation between the Program Specific Objectives and the outcomes is given in the following table

PROGRAM		PROGRAMME OUTCOMES										
OBJECTIVES (PSOs)	PO1	PO2	PO3	PO4	P05	PO6	P07	PO8	PO9	PO10	PO11	PO12
PSO1	3	2		\cap	3		$\langle \rangle$		2	2		3
PSO2	3	3	3	3	3	3	3	3	3	3	3	3

Syllabi for I to VIII Semester SEMESTER I

21FI 101	1EL101 COMMUNICATIVE ENGLISH & LIFE SKILLS	L	Т	Р	С
211212101	COMMUNICATIVE ENGLISH & LIFE SKILLS	2	0	0	2
OBJECTIV	/ES:				
The Course	will enable learners to:				
• Strei	ngthen their basic reading and writing skills.				
• Com	prehend listening contexts competently.				
• Impr	ove their speaking skills to speak fluently in real contexts.				
• Deve	elop vocabulary of a general kind and enhance their grammatical accur	racy	•		
UNIT I	COMMUNICATION BASICS				6
Listening -	short texts- short formal and informal conversations. Speaking- introd	ucir	ig o	nese	elf -
exchanging	personal information. Reading - practice in skimming - scanning	and	pre	dict	ng.
Writing-con	npleting sentences - developing hints- free writing - Everyday	y e	xpre	essic	ons-
collocations	Life Skills - Overview of Life Skills: significance of life skills.		-		-
UNITI	COMMUNICATION INTERMEDIATE		ι.		6
Listening- te	elephonic conversations. Speaking – sharing information of a personal l	sind	<u> </u>	reet	ing
– taking l	eave. Reading – short comprehension passages - pre-reading	-pos	t r	ead	ng-
questions) -	Writing – paragraph writing- topic sentence - main ideas short parrati	ve d	esci	rinti	ons
using some	suggested vocabulary and structures. Life skills – Self-awareness: defi	nitic	on, n	leed	for
self-awarene	ess; Coping with Stress and Emotions.		,		
UNIT III	COMMUNICATION VANTAGE				6
Listening -	listening to longer texts and filling up the table - Speaking- asking	g ab	out	rou	tine
actions and e	expressing opinions. Reading- Long texts (cloze reading) - Writing- jun	nble	d se	nter	ces
- product de	scription - use of reference words and discourse markers. Grammar – T	lens	es -	phra	asal
verbs - Wh	- Questions, yes or no questions and direct / indirect questions	- co	ount	able	e &
	nouns – modal verbs. Life skills – Assertiveness vs Aggressiveness				6
		<u> </u>		.1	U
Listening -	listening to dialogues or conversations and completing exercises ba	ised	on	the	m -
magazines -	Writing - letter writing informal or personal letters - e-mails-conventi	ons	of n	erse	xis- mal
email - Lang	uage development - synonyms – antonyms. Life Skills – Problem Solvi	ng J	lech	nia	ies.
UNIT V	COMMUNICATION HIGHER	0 -		1	6
Listening –	listening to TED talks - Speaking - role play - Reading - Biograph	nies	– V	Vriti	ng-
writing shor	t essays (analytical & issue-based essays) – dialogue writing. Life Skil	ls –	Lea	ders	hip
& Decision	making.				
	TOTAL:	: 30	PE	RIO	DS
OUTCOM	ES:				

At the end of this course, the students will be able to:

CO1: Read articles of a general kind in magazines and newspapers efficiently and identify different life skills.

CO2: Participate efficiently in informal conversations and develop an awareness of the self and apply well-defined techniques to cope with emotions and stress.

CO3: Comprehend conversations and short talks delivered in English.

CO4: Write short essays of a general kind and personal letters and emails in English.

CO5: Develop vocabulary of a general kind by enriching their reading skills.

CO6: Use appropriate thinking and problem- solving techniques to solve new problems.

OBJECTIV	/ES:	3	2	U	4
Objectiv					
The syllabu	is is designed to:				
• Expl	ain the concepts of matrix algebra.				
• Mak	e the students understand the idea of curvature, evolutes and envel	opes	•		
• Impa	art the knowledge of functions of several variables.				
• Intro	duce the concepts of Gamma and Beta integral.				
• Deve	elop an understanding on the basics of multiple integrals.				
UNIT I	MATRICES				9+6
Eigenvalues	and Eigenvectors of a real matrix – Characteristic equation – Prope	rties	of ei	genv	alues
matrices by	orthogonal transformation – Reduction of a quadratic form to	Cano	gonar nical	izati fori	on or m by
orthogonal t	ransformation – Nature of quadratic forms.	cuno	meur	1011	n oy
UNIT II	APPLICATIONS OF DIFFERENTIAL CALCULUS				9+6
Curvature in	Cartesian and Polar Co-ordinates - Centre and radius of curvature -	Circ	le of	curv	vature
– Evolutes –	Envelopes (excluding Evolute as envelope of normals).				
UNIT III	FUNCTIONS OF SEVERAL VARIABLES				9+6
Limits – C Differentiati variables – N multipliers.	on of implicit functions – Jacobian and properties – Taylor's series f Maxima and minima of functions of two variables – Lagrange's meth	Total for fu .od of	der nctio funde	ivati ns o etern	ve – f two nined
UNIT IV	GAMMA, BETA INTEGRALS AND APPLICATIONS				9+6
Gamma and integrals using the second	Beta Integrals – Properties – Relation between Gamma and Beta functions.	tions	, Eva	luati	on of

9

9

9

9

9

OBJECTIVES:

The Course will enable learners to:

1. To learn the fundamental concepts of physics and apply this knowledge to scientific, engineering, and technological problems.

2. To make the students enrich basic knowledge in electronics and quantum concepts and apply the same in computing fields.

UNIT I LASER AND FIBRE OPTICS

Population of energy levels – Einstein's A and B coefficients derivation -Resonant cavity - Optical amplification (qualitative) - Semiconductor lasers: homojunction and heterojunction- Engineering applications of lasers in data storage (qualitative).

Fibre optics: Principle, numerical aperture and acceptance angle -V-number - Types of optical fibres (Material, refractive index and mode) -Losses in optical fibre - Fibre optic communication-Fibre optic sensors (pressure and displacement).

UNIT II MAGNETIC PROPERTIES OF MATERIALS

Magnetic dipole moment - atomic magnetic moments - Origin of magnetic moments- Magnetic permeability and susceptibility - Magnetic material classifications- Diamagnetism - Paramagnetism- Ferromagnetism - Antiferromagnetism- Ferrimagnetism - Ferromagnetism: Domain Theory- M versus H behaviour- Hard and soft magnetic materials - Examples and uses - Magnetic principle in computer data storage - Magnetic hard disc (GMR sensor)- Introduction to Spintronics.

UNIT III ELECTRICAL PROPERTIES OF MATERIALS

Classical free electron theory - Expression for electrical conductivity – Thermal conductivity expression - Wiedemann-Franz law - Success and failures of CFT- Particle in a three dimensional box - Degenerate states - Effect of temperature on Fermi function- Density of energy states and average energy of electron at 0 K - Energy bands in solids.

UNIT IV SEMICONDUCTOR PHYSICS

Intrinsic Semiconductors – Energy band diagram -Direct and indirect band gap semiconductors -Carrier concentration in intrinsic semiconductors- Band gap determination-Extrinsic semiconductors - n-type and p-type semiconductors (qualitative) -Variation of Fermi level with temperature and impurity concentration - Hall effect and its applications.

UNIT V INTRODUCTION TO NANO DEVICES AND QUANTUM COMPUTING

Introduction to nanomaterial -Electron density in bulk material - Size dependence of Fermi energy - Quantum confinement - Quantum structures - Density of states in quantum well, quantum wire and quantum dot structure - Band gap of nanomaterial- Tunneling: single electron phenomena and single electron transistor - Quantum dot laser.

Quantum computing: Introduction - Differences between quantum and classical computation.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of this course, the students will be able to:

CO1:Know the principle, construction and working of lasers and their applications in fibre optic communication.

CO2: Understand the magnetic properties of materials and their specific applications in computer data storage.

CO3: Analyze the classical and quantum electron theories and energy band structures.

CO4: Evaluate the conducting properties of semiconductors and its applications in various devices.

CO5: Comprehend the knowledge on quantum confinement effects.

CO6: Apply optical, magnetic and conducting properties of materials, quantum concepts at the nanoscale in various applications.

21CH101 ENGINEERING CHEMISTRY		L	Τ	Р	С			
		3	0	0	3			
OBJECTIVES:								
 The goal of this course is to achieve conceptual understanding of the applications of chemistry in engineering and technology. The syllabus is designed to: Understand the role of chemistry in everyday life. 								
Lear nuclear reac	 Develop an understanding of the basic concepts of electro chemistry and its applications. Learn the principles and generation of energy in different types of batteries, fuel cells, nuclear reactors, solar cells and wind mills. 							
• Mak of speciality	e them acquire basic knowledge of polymers, their classification and t polymers in engineering and technology.	he a	ppli	cati	ons			
• Und	erstand the preparation, properties and applications of nanomaterials in	ı var	10US	s fie	lds.			
UNIT I	CHEMISTRY IN EVERYDAY LIFE				8			
incidental) - perfumes, d nutritive val Water – im desalination	effects of food adulterants – cosmetics and personal care products (f eodorants, shampoos)- effects – beverages-classification – carbonate ues and effects. purities – industrial uses of water – hardness, external treatment (demi (reverse osmosis).	airne airne ad b	even	rage tior	nai, ms, es – n) –			
UNIT II	ELECTROCHEMISTRY	-			10			
Introduction – terminology - conductance of electrolytes- specific conductance, equivalent conductance, molar conductance- factors affecting conductance- origin of electrode potential-single electrode potential, standard electrode potential- measurement of single electrode potential-reference electrodes (standard hydrogen electrode, calomel electrode) - electrochemical series, applications – measurement of EMF of the cell – Nernst equation (derivation), numerical problems.								
UNIT III	ENERGY STORAGE DEVICES AND ENERGY SOURCES	0		<u> </u>	9			
 Batteries – primary battery (alkaline battery) - secondary battery (Pb-acid battery, Ni-metal hydride battery, Li-ion battery) - fuel cells (H2-O2 fuel cell). Nuclear Energy –nuclear reactions – fission, fusion, differences, characteristics– nuclear chain reactions –light water nuclear reactor – breeder reactor. 								
Renewable energy sources - solar energy – thermal conversion (solar water heater and heat collector) - photovoltaic cell– wind energy.								
UNIT IV	POLYMERS A POLYMERS				9			
 Introduction – monomer, functionality, degree of polymerization – classification based on sources and applications – effect of polymer structure on properties - types of polymerization (addition, condensation) - thermoplastic and thermosetting resins – preparation, properties and applications of Teflon, polyvinyl chloride, polycarbonate, Bakelite. Special polymers - biodegradable polymers - properties and applications of polycaprolactone, polyhydroxyalkanoate – properties and applications of electrically conducting polymers (poly 								
aniline, polyvinylidene fluoride).								

UNIT V NANOCHEMISTRY

Introduction - synthesis - top-down process (laser ablation, chemical vapour deposition), bottom-up process (precipitation, electrochemical deposition) - properties of nanomaterials types (nanorods, nanowires, nanotubes-carbon nanotubes, nanocomposites).

Applications of carbon nanotubes - applications of nanomaterials in electronics, information

9

technology, medical and healthcare, energy, environmental remediation, construction and transportation industries.

OUTCOMES:

TOTAL: 45 PERIODS

At the end of this course, the students will be able to:

CO1: Illustrate the role of chemistry in everyday life and the industrial uses of water.

CO2: Construct electrochemical cells and to determine the cell potential.

CO3: Compare and analyse the different energy storage devices and to explain potential energy sources.

CO4: Classify different types of polymeric materials and to discuss their properties and applications.

CO5: Explain basic concepts of nano chemistry and to enumerate the applications of nanomaterials in engineering and technology.

21GE101	PROBLEM SOLVING AND C PROCRAMMING	L	Т	Р	С
2161101	I ROBLEM SOLVING AND CI ROGRAMMING	3	0	0	3

n AAI

OBJECTIVES:

The syllabus is designed to:

• To make the students understand the fundamentals of problem solving using Algorithm and Flowchart.

• To teach the basic programming constructs for solving simple problems.

அறிடீ.

- To introduce the basic concepts of arrays and strings.
- To acquaint the students about functions, pointers, structures and their relationship.
- To impart knowledge on the concepts of file handling.

UNIT I INTRODUCTION TO ALGORITHM AND C 9 Introduction to Computer System – Block diagram, Program Development Life Cycle General problem Solving concepts: Algorithm and Flowchart for problem solving with Sequential Logic Structure, Decisions and Loops. Imperative languages: Introduction to imperative language, syntax and constructs of a specific language (ANSI C), Applications Types, Operators: Variable Names, Data Type and Sizes (Little Endian Big Endian), Constants, Declarations, Basic I/O using scanf, printf, Operators – Types, Precedence, Associativity, Proper variable naming and Hungarian Notation. **UNIT II CONTROL FLOW STATEMENTS** 7 Control Flow with discussion on structured and unstructured programming: Statements and Blocks, If-Else-If, Switch, Loops - while, do, for, break and continue, goto labels, structured and unstructured programming. **UNIT III ARRAYS AND FUNCTIONS** 10 Arrays and Strings – Initialization, Declaration – One Dimensional and Two Dimensional arrays - Linear search, Binary Search, Matrix Operations (Addition and Subtraction) Basics of functions, parameter passing and returning type, C main return as integer, External, Auto, Local, Static, Register Variables, Scope Rules, Block structure, Initialisation, Recursion, Pre-processor, Standard Library Functions and return types. **UNIT IV** STRUCTURES AND POINTERS 10 Basic Structures, Structures and Functions, Array of structures. Pointers and address, Pointers and Function Arguments, Pointers and Arrays, Address Arithmetic, character Pointers and Functions, Pointer Arrays, Pointer to Pointer, Initialisation of Pointer Arrays, Command line arguments, Pointer to functions, complicated declarations and how they are evaluated. Pointer of structures, Self-referential structures, Table look up, typedef, unions, Bit-fields 9 UNIT V FORMATTED I/O AND FILE PROCESSING Formatted Output - fprintf, Formated Input - fscanf, Variable length argument list Files - file access including FILE structure, fopen, fread, fwrite, stdin, sdtout and stderr, File Types - Text, Binary - Error Handling including exit, perror and error.h, Line I/O, related miscellaneous functions. **TOTAL: 45 PERIODS OUTCOMES:** At the end of this course, the students will be able to: CO1: Develop algorithmic solutions to simple computational problems **CO2:** Develop simple applications using basic constructs **CO3:** Write programs using arrays and strings **CO4:** Design and implement applications using functions, pointers and structures. **CO5:** Design applications using sequential and random access file processing. **TEXT BOOKS:** Brian W Kernighan and Dennis M Ritchie, The C Programming Language, Pearson 1. Education India, 2nd Edition, 2015.

BASIC ELECTRICAL, ELECTRONICS AND MEASUREMENT ENGINEERING

L	Т	Р	С
3	0	0	3

9

9

9

9

9

OBJECTIVES:

The syllabus is designed to:

- To impart knowledge on fundamentals of electrical circuits and its analysis
- To interpret the basic principles of electrical machines and their performance
- To examine the different energy sources and protection methods
- To explore the different types of electronic circuits and its characteristics
- To acquire knowledge on the principles and operation of measuring instruments and transducers

UNIT I ELECTRICAL CIRCUITS ANALYSIS

Ohms Law, Kirchhoff's Law- power- series and parallel circuit analysis with resistive, capacitive and inductive network - nodal analysis, mesh analysis- - star delta conversion.

UNIT II POWER SYSTEM

Power Generation -Thermal-Hydro-wind and solar. construction and working principle. Protection-need for earthing, fuses and circuit breakers. Energy Tariff calculation for domestic loads.

UNIT III ELECTRICAL MACHINES

DC Generator-Types, Construction, working principle, EMF equation, DC Motor- working Principle, - Three Phase Induction Motors- Types, Construction, working principle- Single Phase Induction Motors, –working Principle -Transformers-Types and construction, EMF equation-Basics of Stepper Motor- applications of various machines

UNIT IV ELECTRONIC CIRCUITS

PN Junction-VI Characteristics of Diode, Rectifier- zener diode, Transistors OPAMPconfiguration, differentiator, integrator, ADC- Types, Successive approximation type, DAC-Types, Weighted resistor DAC and R-2R ladder type, Voltage regulator IC using LM 723, LM 317.

UNIT V ELECTRICAL MEASUREMENT

Characteristic of measurement-errors in measurement, torque in indicating instruments- moving coil and moving iron meters, Induction type Energy meter and Dynamometer watt meter. Transducers- classification-Thermocouple, RTD, Strain gauge, LVDT, LDR and piezoelectric. Oscilloscope-CRO.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of this course, the students will be able to:

CO1: Analyse the electric circuits.

CO2: Classify the different types of electric machines and transformers

CO3: Study the different type of renewable sources and common domestic loads.

CO4: Acquire knowledge in basics of electronic circuits.

CO5: Describe the different types of measuring instruments and transducers.

9. Dete	rmination of band gap of a semiconductor.						
	TOTAL:	: 30	PE	RIO	DS		
OUTCOMES:							
Upon comp	letion of the course, based on hands-on experience of the student	ts, tl	hev	will	be		

Upon completion of the course, based on hands-on experience of the students, they will be able to

- **CO1:** Use the ultrasonic interferometer and to determine the wavelength and velocity of ultrasonic waves of a liquid.
- **CO2:** Examine the thermal conductivity of a bad conductor.
- **CO3:** Determine the wavelength of mercury spectrum and determine the wavelength of a laser source, particle size, divergence angle of semiconductor laser source using diffraction grating and to analyze the numerical aperture and acceptance angle of an optical fiber.
- **CO4:** Examine the Young's modulus of a beam by uniform and non-uniform bending and to estimate the moment of inertia of the disc and rigidity modulus of wire by torsional pendulum.

CO5: Calculate the thickness of a thin wire by the interference pattern.

CO6: Determine the band gap of a semiconductor.

REFERENCES:

- 1. Physics laboratory manual, Department of Physics, R.M.K. Engineering College, 2019.
- 2. Wilson J.D. and Hernandez C.A., Physics Laboratory Experiments, Houghton Mifflin Company, New York, 2005.

TOTAL: 30 PERIODS

OBJECTIVES:

The syllabus is designed to:

• To make the students acquire practical skills through volumetric and instrumental analysis.

LIST OF EXPERIMENTS (Any five experiments to be conducted)

- 1. Determination of total, temporary and permanent hardness of water by EDTA method.
- 2. Conductometric titration of strong acid vs. strong base.
- 3. Determination of strength of acids in a mixture using a conductivity meter.
- 4. Determination of strength of given hydrochloric acid using a pH meter.
- 5. Estimation of the iron content of the given solution using a potentiometer.
- 6. Estimation of the iron content of the water sample using a spectrophotometer (thiocyanate method).
- 7. Estimation of sodium present in water using a flame photometer.
- 8. Determination of the molecular weight of polyvinyl alcohol using Ostwald viscometer.
- 9. Determination of corrosion rate by weight loss method.
- 10. Determination of flash and fire point of a lubricating oil (Pensky Martens apparatus).
- 11. Determination of concentration of a given solution by constructing a galvanic cell.

OUTCOMES:

Based on hands-on experience, students will be able to:

CO1: Analyse the given hard water sample and estimate different types of hardness present.

- **CO2:** Observe and analyse the change in conductivity of an acid(s) when added with base through conductometry.
- **CO3:** Examine the change in pH when an acid is added with a base using pH meter.
- **CO4:** Understand the redox reactions and its impact on emf values through potentiometry.

CO5: Determine the flash and fire point of an oil.

CO6: Assess the corrosion rate of a given metal.

CO7: Construct an electrochemical cell to determine the concentration of the given solution.

21GE111C PROGRAMMING LABORATORYL0		L 0	Т 0	P 4	C 2	
OBJECTI	OBJECTIVES:					
The syllal	bus is designed to:					
 To make the students write simple programs using basic constructs To familiarize the concepts of strings, pointers, functions and structures To equip the students on the knowledge of file processing concepts 						
LIST OF EXPERIMENTS:						
1. Cor	astructing Flow charts using RAPTOR tools.					
2. Pro	grams using I/O statements and expression					
3. Wr	te a program to find whether the given line is horizontal or vertical.					
4. Wr	te a program to calculate the distance between two points $p1(x1,y1)$, $p2$	2(x2	,y2)).		
5. Wr	te a program to calculate the force for the given mass and acceleration.					
6. Wr	te a program to calculate the Young's modulus.					
7. Wr	te a program to calculate the type of solution based on its pH value.					
8. Wr	te a program to temperature conversion (Fahrenheit to Celsius and vice	e vei	sa)			
9. Pro	grams using decision-making constructs.		,			
10. Wr	te a program to find whether the given year is leap year or Not? (H	Hint	: no	t ev	ery	
centurion y	ear is a leap. For example 1700, 1800 and 1900 is not a leap year)				-	
11. Des	ign a calculator to perform the operations, namely, addition	1, S	subt	racti	on,	
multiplicat	ion, division and square of a number.					
12. Che	eck whether a given number is Armstrong number or not?					
13. Giv	en a set of numbers like, find sum of weights based on the following co	ondi	tion	s.		
• 5 if	it is a perfect cube.					
• 4 if	4 if it is a multiple of 4 and divisible by 6.					
• 3 if	it is a prime number.					
Sort the nu	mbers based on the weight in the increasing order as shown below					
<10, its we	ight>, <36, its weight>, <89, its weight>					
14. Pop	ulate an array with height of persons and find how many persons are abo	ove	the a	aver	age	
height.	1					
15. Populate a two dimensional array with height and weight of persons and compute the Body						
Mass Index	a of the individuals.					
16. Giv characters.	en a string —a\$bcd./fg find its reverse without changing the posi (Example input:a@gh%;j and output:j@hg%;a)	tion	of	spe	cial	
17. Con	overt the given decimal number into binary, octal and hexadecimal num	bers	s usi	ng u	iser	
defined functions.						
18. Fro	m a given paragraph perform the following using built-in functions:					
a. Find the	total number of words.					
b. Capitalize the first word of each sentence.						
c. Replace	a given word with another word.					
19. Sol	19. Solve towers of Hanoi using recursion.					
20. Sor	t the list of numbers using pass by reference.					
	20					

21. Generate salary slip of employees using structures and pointers. Create a structure Employee with the following members:

EID, Ename, Designation, DOB, DOJ, Basicpay

Note that DOB and DOJ should be implemented using structure within structure.

22. Compute internal marks of students for five different subjects using structures and functions.

23. Insert, update, delete and append telephone details of an individual or a company into a telephone directory using random access file.

24. Count the number of account holders whose balance is less than the minimum balance using sequential access file.

25. Mini project: Create a —Railway reservation system with the following modules

- Booking
- Availability checking
- Cancellation
- Prepare chart

OUTCOMES:

Upon completion of the course, the students will be able to:

CO1: Write programs for simple applications making use of basic constructs, arrays and strings.

CO2: Develop programs involving functions, recursion, pointers, and structures.

CO3: Create applications using sequential and random access file processing.

TOTAL: 60 PERIODS

21EL111INTERPERSONAL SKILLS (LISTENING & SPEAKING)LT00

L	Т	Р	С
0	0	2	1

6

6

6

6

6

OBJECTIVES:

The Course will enable learners to:

- Equip and strengthen the English language skills.
- Provide guidance and practice to engage in specific academic speaking activities and enhance
- Writing skills with specific reference to technical writing (interview skills).
- Improve general and academic listening skills.
- Demonstrate their presentation skills competently.

UNIT I

Listening as a key skill- its importance- speaking - give personal information - ask for personal information - express ability - enquire about ability - ask for clarification Improving pronunciation - pronunciation basics - taking lecture notes - preparing to listen to a lecture - articulate a complete idea as opposed to producing fragmented utterances.

UNIT II

Listen to a process information- give information, as part of a simple explanation – conversation starters: small talk - stressing syllables and speaking clearly - intonation patterns - compare and contrast information and ideas from multiple sources- converse with reasonable accuracy over a wide range of everyday topics.

UNIT III

Deliver a five-minute informal talk - greet - respond to greetings - describe health and symptoms - invite and offer - accept - decline - take leave - listen for and follow the gist- listen for detail.

UNIT IV

Being an active listener: giving verbal and non-verbal feedback - participating in a group discussion - summarizing academic readings and participating in conversations.

UNIT V

Formal and informal talk - listen to follow and respond to explanations, directions and instructions in academic and business contexts - strategies for presentations and interactive communication - group/pair presentations - negotiate disagreement in group work.

TOTAL: 30 PERIODS

Щаран

OUTCOMES:

At the end of this course, the students will be able to:

CO1: Listen and respond appropriately.

CO2: Participate in group discussions.

CO3: Make effective presentations.

CO4: Participate confidently and appropriately in conversations both formal and informal.

UNIT IV REPORT WRITING

Listening - Listening to documentaries and making notes. Speaking – mechanics of presentations-Reading - reading for detailed comprehension- Writing- Report Writing (accident and survey) minutes of a meeting - Vocabulary Development- finding suitable synonyms-paraphrasing-. Language Development- reported speech.

UNIT V **GROUP DISCUSSION AND JOB APPLICATIONS**

Listening- TED talks; Speaking -participating in a group discussion -Reading- reading and understanding technical articles Writing- email etiquette- job application - cover letter - Résumé preparation (via email and hard copy)- Vocabulary Development- verbal analogies - Language Development- clauses- if conditionals.

TOTAL: 30 PERIODS

06

06

OUTCOMES:

At the end of this course, the students will be able to:

CO1: Read technical texts and write area- specific texts effortlessly.

CO2: Listen and comprehend lectures and talks in their area of specialization successfully.

CO3: Speak appropriately and effectively in varied formal and informal contexts.

CO4: Write reports and winning job applications.

TEXT BOOKS:

1. Booth-L. Diana, Project Work, Oxford University Press, Oxford: 2014.

2. Sudharshana. N. P and Saveetha C. English for Technical Communication. Cambridge University Press: New Delhi, 2016.

21MA201 ENGINEERING MATHEMATICS – II	L	Τ	P	С			
	3	2	0	4			
OBJECTIVES:							
The syllabu	s is designed to:						
• Expl	ain various techniques in solving ordinary differential equations.						
• Mak	e the students understand the concepts of vector differentiation and	1 inte	grati	on.			
• Intro	duce the concepts of Laplace transforms and its applications.						
• Deve	elop an understanding on analytic function, conformal mapping an	d cor	nplex	X			
integration.	integration.						
UNITI	ORDINARY DIFFERENTIAL EQUATIONS		2		9+6		
Higher orde	er linear differential equations with constant coefficients – Meth	od o	f vai	riatio	on of		
with consta	- Cauchy's and Legendre's linear equations – Simultaneous first of one of the coefficients	ier m	leare	equa	tions		
UNIT II	VECTOR CALCULUS				9+6		
Gradient. di	vergence and curl (excluding vector identities) – Directional deriv	ative	– In	rotat	ional		
and solenoid	lal vector fields – Vector integration – Green's theorem in a plane	, Gau	ıss di	verg	gence		
theorem an	d Stoke's theorem (Statement only) - Simple applications inv	olvii	ng ci	ubes	and		
rectangular	parallelopipeds.						
UNIT III	LAPLACE TRANSFORMS				9+6		
Laplace tran	sforms – Sufficient condition for existence – Transform of elem	entai	y fu	nctio	ons –		
Basic prope	rties – Transforms of derivatives and integrals of functions – Derivatives and impulse functions – Transforms of unit stop function and impulse functions – Transformations –	atives	s and	inte	grals		
functions. In	\sim	iisioi) — In	iitial	and	final		
value theore	ems – Solution of linear ordinary differential equation of second of	order	with	con	stant		
coefficients	using Laplace transformation techniques.						
UNIT IV	COMPLEX DIFFERENTIATION AND CONFORMAL MA	PPIN	IG		9+6		
Functions of	f a complex variable – Analytic functions: Necessary conditions -	- Cau	ichy-	Rier	nann		
equations and	nd sufficient conditions (Statement only) – Harmonic and orthog	gonal	prop	perti	es of		
analytic fur	$z = z + k kz \frac{1}{z}$ and bilinear transformation	ions	- C	onic	ormai		
UNIT V	COMPLEX INTEGRATION				9+6		
Complex in	tegration – Statement and applications of Cauchy's integral theo	rem	and (Сацо	chv's		
integral for	mula – Taylor's and Laurent's series expansions – Singular po	ints	– Re	esidu	ies –		
Statement a	nd applications of Cauchy's residue theorem – Evaluation of real c	lefini	te in	tegra	als as		
contour inte	grals around unit circle and semi-circle (excluding poles on the rea	ıl axi	s).				
	TOT	AL: '	75 PI	ERI	ODS		
OUTCOM	ES:						
At the end of this course, the students will be able to:							
CO1: Solve the higher order linear differential equations.							
CO2: Determine the gradient of a scalar field, divergence and curl of a vector fields and							
interp	ret their physical meaning and evaluate line, surface and volume in	ntegra	als by	y ve	ctor		
integr	ation.						
CO3: Apply Laplace Transforms method for solving linear ordinary differential equation.							
CO4: Construct an analytic function and analyze conformal mapping.							
CO5: Evalu	ate the real integrals using complex integration.

21CH102

OBJECTIVES:

The goal of this course is to enlighten and sensitize the students on environmental conservation and social issues. The course is designed to:

• Appreciate the natural resources of environment which are inherently created for supporting life.

- Learn scientific and technological solutions to current day pollution issues.
- Study the interrelationship between living organisms and environment
- Understand the integrated themes of biodiversity.

• Appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.

UNIT I NATURAL RESOURCES

11

11

9

Introduction - scope and importance of environment – need for public awareness.

Forest resources- Use and over-exploitation, deforestation - timber extraction, mining, dams and their effects on forests and tribal people. **Water resources** - Use and over- utilization of surface and ground water, conflicts over water, dams-benefits and problems. **Mineral resources**- Use and exploitation, environmental effects of extracting and using mineral resources. **Food resources**-World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity. **Energy resources** - Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. **Land resources**- Land as a resource, land degradation, soil erosion and desertification – role of an individual in conservation of natural resources - case studies.

UNIT II POLLUTION AND ITS MANAGEMENT

Pollution – causes, effects and control measures - Air pollution- Water pollution - Soil pollution - Marine pollution - Noise pollution - Thermal pollution - Nuclear hazards - nuclear accidents and holocaust - role of an individual in prevention of pollution – case studies.

Waste management - causes, effects and control measures of municipal solid wastes, e- waste, plastic waste.

UNIT III ECOSYSTEMS AND BIODIVERSITY

Introduction to ecosystems – structure and function of an ecosystem – energy flow in the ecosystem – ecological succession – food chains, food webs and ecological pyramids - types, characteristic features, structure and functions of - Forest ecosystem - Grassland ecosystem - Desert ecosystem - Aquatic ecosystems (lakes, oceans)

Introduction to biodiversity – types (genetic, species and ecosystem diversity) –values of biodiversity – threats to biodiversity - endangered and endemic species – conservation of biodiversity (in-situ and ex-situ conservation) - India as a mega-diversity nation – hot-spots of biodiversity in India

UNIT IV SOCIAL ISSUES AND THE ENVIRONMENT

Sustainable development – sustainable development goals - water conservation, rain water harvesting, watershed management – resettlement and rehabilitation - consumerism and waste products, value education.

Disaster management- floods, drought, earthquake, tsunami, cyclone and landslides - case studies.

Environmental ethics- issues and possible solutions – environment protection act – air (prevention and control of pollution) act – water (prevention and control of pollution) act – wildlife

8

protection act – forest conservation act.

UNIT V HUMAN POPULATION AND THE ENVIRONMENT

6

Introduction - population growth, variation among nations, population explosion, family welfare programme – women and child welfare - environment and human health – endemic/epidemic/pandemic, COVID – 19, HIV / AIDS– role of information technology in environment and human health –environmental impact assessment- case studies.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of this course, the students will be able to:

CO1: Illustrate the importance and conservation of natural resources.

CO2: Assess the impact of various pollutants and suggest appropriate pollution control methods. **CO3:** Explain the basic structure of ecosystem and the conservation of biodiversity.

CO4: Analyze the social issues related to environment and recommend suitable solutions.

CO5: Investigate the trends in population explosion and assess its impact.

21ME103

L	Т	Р	С
2	0	4	4

OBJECTIVES:

- To develop in students, graphic skills for communication of concepts, ideas and design of Engineering products.
- To expose them to existing national standards related to technical drawings.

UNIT I INTRODUCTION TO CONVENTIONS IN ENGINEERING DRAWING 18 AND CAD COMMANDS

Importance of graphics in engineering applications - Use of drafting instruments - BIS conventions and specifications - Size, layout and folding of drawing sheets - Lettering and dimensioning. Introduction to CAD commands- CAD user interface- coordinate systems, object selection methods, selection of units and precession. Sketching – line, circle, arc, polygon, rectangle and ellipse. Working with object snaps, layers and object properties. Editing the objects - copy, move, trim, extend, working with arrays, mirror, scale, hatch, fillet and chamfer. Conversion of simple pictorial diagrams to orthographic view using CAD software.

UNIT II PLANE CURVES

16

20

18

TOTAL: 90 PERIODS

Basic Geometrical constructions, Curves used in engineering practices: Conics – Construction of ellipse, parabola and hyperbola by eccentricity method – Construction of cycloid – construction of involutes of square and circle – Drawing of tangents and normal to the above curves. 18

PROJECTION OF POINTS, LINES AND PLANE SURFACE UNIT III

Orthographic projection- principles-Principal planes-First angle projection-projection of points. Projection of straight lines (only First angle projections) inclined to both the principal planes -Determination of true lengths and true inclinations by rotating line method and traces Projection of planes (polygonal and circular surfaces) inclined to both the principal planes by rotating object method.

UNIT IV PROJECTION OF SOLIDS AND PROJECTION OF SECTIONED **SOLIDS**

Projection of simple solids like prisms, pyramids, cylinder, cone and truncated solids when the axis is inclined to one of the principal planes by rotating object method. Sectioning of above solids in simple vertical position when the cutting plane is inclined to the one of the principal planes and perpendicular to the other – obtaining true shape of section.

UNIT V **DEVELOPMENT OF SURFACES AND ISOMETRIC PROJECTION**

Development of lateral surfaces of simple and sectioned solids – Prisms, pyramids cylinders and cones. Principles of isometric projection – isometric scale –Isometric projections of simple solids and truncated solids - Prisms, pyramids, cylinders, cones- combination of two solid objects in simple vertical positions.

OUTCOMES:

At the end of this course, the students will be able to:

- **CO1:** Illustrate the fundamentals and standards of engineering drawing and apply the concepts of orthographic projections using CAD software.
- CO2: Interpret and construct various plane curves.
- **CO3:** Develop orthographic projections of points, lines and plane surfaces.
- **CO4:** Make use of concepts in projection to draw projections of solids and interpret the concept in section of solids.

CO5: Interpret and visualize development of surfaces.

CO6: Interpret and visualize isometric projection of simple solids.

21CS201

9

9

9

9

OBJECTIVES:

- To understand the concepts of ADTs
- To learn linear data structures lists, stacks, and queues
- To understand and apply Tree data structures
- To understand and apply Graph structures
- To analyze sorting, searching and hashing algorithms

UNIT I LINEAR DATA STRUCTURES – LIST

Algorithm analysis-What to analyze-running time calculations-Abstract Data Types (ADTs)-List ADT – array-based implementation – linked list implementation — singly linked lists- circularly linked lists- doubly-linked lists – applications of lists – Polynomial Manipulation – All operations (Insertion, Deletion, Merge, Traversal).

LINEAR DATA STRUCTURES - STACKS, QUEUES **UNIT II**

Stack ADT - Stack Model - Implementations: Array and Linked list - Applications - Balancing symbols - Evaluating arithmetic expressions - Conversion of Infix to postfix expression- Queue ADT - Queue Model - Implementations: Array and Linked list - Circular Queue - Priority Queue - deQueue – applications of queues.

NON LINEAR DATA STRUCTURES - TREES **UNIT III**

Tree ADT – tree traversals - Binary Tree ADT – expression trees – applications of trees – binary search tree ADT - Threaded Binary Trees- AVL Trees - B-Tree - B+ Tree - Priority Queues -Applications of priority queues.

UNIT IV NON LINEAR DATA STRUCTURES - GRAPHS

Definition - Representation of Graph - Types of graph - Breadth-first traversal - Depth-first traversal - Topological Sort - Bi-connectivity - Cut vertex - Euler circuits - Applications of graphs.

UNIT V SEARCHING, SORTING AND HASHING TECHNIQUES

Searching- Linear Search - Binary Search. Sorting - Bubble sort - Selection sort - Insertion sort -Shell sort - Radix sort. Hashing- Hash Functions - Separate Chaining - Open Addressing -Rehashing - Extendible Hashing.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of this course, the students will be able to:

CO1:Implement abstract data types for linear data structures.

ኯ፝፝ቘ CO2: Apply the appropriate linear data structures to solve problems.

CO3: Identify and use appropriate tree data structures in problem solving.

CO4:Choose appropriate Graph representations and solve real-world applications.

CO5:Critically analyze the various sorting and searching algorithms.

PYTHON PROGRAMMING (LAB INTEGRATED)

L	Т	Р	С
3	0	2	4

9+6

9+6

9+6

9+6

9+6

भुभुभुभू

OBJECTIVES:

- To understand and write simple Python programs.
- To write Python programs using functions and understand recursion
- To solve problems using Python data structures lists, tuples, dictionaries.
- To understand files, modules and packages in Python.
- To use Exceptions, Standard Libraries and IDE for application development.

UNIT I INTRODUCTION TO PYTHON

Introduction to Python programming – Arithmetic Operators - values and types - variables, expressions, statements – Functions – Conditionals and Recursion – Iteration.

UNIT II FUNCTIONS

Fruitful functions: Return Values, Incremental Development, Composition, Boolean functions, Recursion, Example, Checking Types – Strings: len, Traversal with a for loop, String slices, Immutable, Searching, Looping and Counting, String Methods, in Operator, String Comparison – Case Study: Word Play.

UNIT III LISTS, DICTIONARIES, TUPLES

Lists: Sequence, Mutable, Traversing, Operations, list slices, list methods, Map, Filter and Reduce, Deleting elements, Lists and Strings, Objects and Values, Aliasing, List Arguments.

Dictionaries: Mapping, Collection of Counters, Looping and Dictionaries, Reverse Lookup, Dictionaries and Lists, Memos, Global Variables.

Tuples: Immutable, Tuple Assignment, Tuple as Return Values, Variable-length Argument Tuples, Lists and Tuples, dictionaries and Tuples, Sequences of Sequences. Case Study: Data Structure Selection.

UNIT IV FILES, MODULES, PACKAGES

Files: Persistence, Reading and Writing, Format Operator, Filenames and Paths, Catching Exceptions - Modules: Importing a module, Packages, Creating a module.

UNIT V EXCEPTIONS, LIBRARIES

Exception Handling – Built-in Exceptions – Application Development with Python: Integrated Development Environment, Python Standard Library.

LIST OF EXPERIMENTS:

1. Compute the GCD of two numbers.

- 2. Find the square root of a number (Newton's method)
- 3. Exponentiation (power of a number)
- 4. Operations on Tuples:
- a. finding repeated elements
- b. slice a tuple
- c. reverse a tuple
- d. replace last value of a tuple
 - 5. String manipulation

a. Get a string from a given string where all occurrences of its first char have been changed to '\$', except the first char itself

b. Python function that takes a list of words and returns the length of the longest one

- c. Python program to remove the characters which have odd index values of a given string
- d. Python program to count the occurrences of each word in a givensentence.

e. Python program that accepts a comma separated sequence of words as input and prints the unique words in sorted form

f. Python function to reverses a string if it's length is a multiple of 4

- 6. List operations
- a. Find the maximum of a list of numbers
- b. Python program to remove duplicates from a list.
- c. Python program to get the smallest number from a list.
- d. Python program to print a specified list after removing the 0th, 4th and 5th elements.

e. Python program to print the numbers of a specified list after removing even numbers from it.

- f. Python program to find the second smallest number in a list.
- 7. Linear search and Binary search
- 8. Selection sort, Insertion sort

9. Merge sort

- 10. First n prime numbers
- 11. Multiply matrices
- 12. Programs that take command line arguments (word count)
- 13. Find the most frequent words in a text read from a file
- 14. Simulate elliptical orbits in Pygame
- 15. Simulate bouncing ball using Pygame

TOTAL: 45 +30 = 75 PERIODS

OUTCOMES:

At the end of this course, the students will be able to:

CO1:Implement simple Python programs.

CO2: Develop Python programs using functions.

CO3: Represent and solve compound data using Python lists, tuples, dictionaries.

CO4: Implement and perform operations on files, modules and packages.

CO5: Apply Exceptions, Standard Libraries and IDE for application development.

ENGINEERING PRACTICES LABORATORY

OBJECTIVES:

21EM111

To maxide expression to the students with hands on experience on various hasis
• To provide exposure to the students with hands on experience on various basic engineering practices in Civil, Mechanical, Electrical and Electronics Engineering.
GROUP A (CIVIL & MECHANICAL)
I CIVIL ENGINEERING PRACTICE15
15
Buildings:
(a) Study of plumbing and carpentry components of residential and industrial
huildings Safety aspects
Plumbing Works:
(a) Study of pipeline joints, its location and functions: valves, taps, couplings,
unions, reducers, elbows in house hold fittings.
(b) Study of pipe connections requirements for pumps and turbines.
(c) Preparation of plumbing line sketches for water supply and sewage works.
(d) Hands-on-exercise:
Basic pipe connections – Mixed pipe material connection – Pipe connections with
different joining components.
(e) Demonstration of plumbing requirements of high-rise buildings
(c) 2 consideration of president graduations of high rise containings.
Carpentry using Power Tools only:
(a) Study of the joints in roofs, doors, windows and furniture.
(b) Hands-on-exercise:
Wood work, joints by sawing, planning and cutting.
II MECHANICAL ENGINEERING PRACTICE 15
Welding:
a. Preparation of butt joints, lap joints and T- joints by Shielded metal arc welding.
b. Gas welding practice
Basic Machining:
(a) Simple Turning and Taper turning
(b) Drilling Practice
Sheet Metal Work:
(a) Forming &Bending:
(b) Model making – Trays and funnels.
(c) Different type of joints.
Machine assembly practice:
(a) Study of centrifugal pump
(b) Study of air conditioner
Demonstration on:
(a) Smithy operations, upsetting, swaging, setting down and bending. Example –
Exercise – Production of hexagonal headed bolt.
(b) Foundry operations like mould preparation for gear and step cone pulley.
(c) Fitting – Exercises – Preparation of square fitting and V – fitting models.
GROUP B (ELECTRICAL & ELECTRONICS)
III ELECTRICAL ENGINEERING PRACTICE 15

3. Measurement of electrical quantities – voltage, current, power & power factor in RLC circuit (series and parallel circuit). Measurement of energy using single phase energy meter for incandescent lamp and 4. LED lamp. 5. Measurement of resistance to earth of an electrical equipment **IV ELECTRONICS ENGINEERING PRACTICE** 15 Study of Electronic components (fixed and Variable): 1. Resistor – Measurement of resistance using colour coding and digital multimeter. Capacitor – Measurement of capacitance using identification code, LCR meter Inductor – Measurement of inductance using colour coding and LCR meter Study of Electronic equipment: 2. Signal generation using AFO (sine, square, triangle for various frequency and amplitude ranges) Measurement of amplitude, frequency, peak-peak, RMS, period, DC level of sine, square and triangle waveform using CRO and DSO. Measurement of DC voltage and current using analog and digital meters Study of Electronic accessories: 3. Circuit connection using Breadboard and wires. Circuit connection using general purpose PCB by Soldering practice techniques. Study of logic gates AND, OR, EX-OR and NOT by demonstration. 4. 5. Generation of Clock Signal. 6. Measurement of ripple factor of HWR and FWR. 7. Study of Iron box, fan and regulator (resistive and electronics type), emergency lamp, Power Tools: (a) Range Finder (b) Digital Live-wire detector **TOTAL: 60 PERIODS** (Part A :30 periods and Part B: 30 periods) **OUTCOMES:** At the end of this course, the students will be able to: **CO1:** Develop carpentry components and pipe connections including plumbing works. **CO2:** Make use of welding equipments to join the structures **CO3:** Analyse the basic machining operations CO4: Develop the models using sheet metal works CO5: Illustrate on centrifugal pump, Air conditioner, operations of smithy, foundry and fittings **CO6:** Fabricate carpentry components and pipe connections including plumbing works.

Draw and demonstrate the layout for a residential house wiring using energy meter,

switches, fuse, indicator, LED lamp, fluorescent lamp with one of the lamps to be controlled by

CO7: Carry out simple wiring as per the layout given

2.

2 different switches

CO8: Measures various electrical parameters like Voltage, Current, Power factor, Energy, Earth resistance etc.

CO9: Calculate ripple factor of a given waveform, use logic gates for simple applications.

LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS:					
CIVIL					
1. Assorted components for plumbing consisting					
of metallic pipes, plastic pipes, flexible pipes,					
couplings, unions, elbows, plugs and					
Other fittings.	15Sets.				
2. Carpentry vice (fitted to workbench)	15Nos.				
3. Standard wood working tools	15Sets.				
4. Models of industrial trusses, door joints, furniture joints	5each				
5. Power Tools: (a)Rotary Hammer	2Nos				
(b) Demolition Hammer	2Nos				
(c) Circular Saw	2 Nos				
(d) Planer	2 Nos				
(e) Hand Drilling Machine	2Nos				
(f) Jigsaw	2 Nos				
MECHANICAL					
	531				
1. Arc welding transformer with cables and holders	5Nos.				
2. Welding booth with exhaust facility	5Nos.				
3. Welding accessories like welding shield, chipping hammer,					
Wire brush, etc.	5 Sets.				
4. Oxygen and acetylene gas cylinders, blow pipe and other					
Welding outfit.2 Nos.					
5. Centre lathe	2 Nos.				
6. Hearth furnace, anvil and smithy tools	2 Sets.				
7. Moulding table, foundry tools	2 Sets.				
8. Power Tool: Angle Grinder	2 Nos				
9. Study-purpose items: centrifugal pump, air-conditioner	One each.				
ELECTRICAL					
1. Assorted electrical components for house wiring (One Way Switch, Two W	ay Switch,				
Lamp Holder, Ceiling rose, LED lamp, fluorescent lamp etc) -15 Nos.					
2. Electrical measuring instruments (Ammeter, Voltmeter, DRB, DIB etc) - 1 e	ach				
3. Earth Tester - 1 No.					
4. Energy Meter, Ammeter, Voltmeter, Lamp load / Resistive load - 1 each					
LECTRONICS					
2. Assorted electronic components for making circuits (Resistor Capacitor Ind	luctor logic				
2. Assorted electronic components for making circuits (Resistor, Capacitor, inc	luctor, logic				
3 Small PCBs Breadboard -10 Nos					
J. Sman FCDS, Dicautoatu - 10 1008.					
4. Multimeters - 10 mos. 5. LCP Mator, DSO 1 Mo					
5. Lex Meter, DSO = 1100.					
U. C.C., AI'U - J INUS. 7 Study numbers items: Iron how for and regulator americancy lamp. Dance E	ndar Digital				
<i>i</i> study purpose tients, non box, fan and regulator, emergency famp, Kange Fi	nder, Digital				

21CS211 DATA STRUCTURES LABORATORY			Т 0	Р 4	C 2			
OBJE	CTIVES:]				
•	To implement the basic data structures for solving simple problems.							
•	To implement linear and non-linear data structures.							
•	To understand the different operations of search trees.							
•	To implement graph traversal algorithms.							
•	To get familiarized to sorting and searching algorithms.							
LIST (OF EXPERIMENTS :							
1.	Array Manipulation							
a.	Find kth smallest element in an unsorted array							
b.	Find the sub array with given sum							
c.	Matrix manipulations – Addition, Subtraction, Multiplication							
d. can be o single u profit if total pro	Job Sequencing: Given an array of jobs where every job has a deadline and earned only if the job is finished before the deadline. It is also given that even init of time, so the minimum possible deadline for any job is 1. How to for only one job can be scheduled at a time. Print the sequence of jobID order of the sequence of jobID order.	a pr ery max er to	rofit job timiz o ma	:. Pr take ze to xin	ofit es a otal nize			
2.	String manipulations:							
a.	Reversing a set of words and count the frequency of each letter in the string.							
b. number except (Pattern Recognition - Find the number of patterns of form 1[0]1 where [0] of zeroes (minimum requirement is one 0) there should not be any other clot in the [0] sequence in a given binary string.	repi nara	resei icter	nts a	iny			
c.	Remove all the occurrences of string S2 in string S1 and print the remainin	g.						
3.	Pointers							
a.	Manipulating two dimensional arrays using pointers.							
b.	Print all permutations of a given string using pointers.							
4.	Dynamic Memory Allocation							
a.	Find Largest Number.							
b.	Print the list in reverse order.							
5.	Array implementation of List, Stack and Queue ADTs.							
6.	Linked list implementation of List, Stack and Queue ADTs.							
7.	Applications of List, Stack and Queue ADTs.							
8.	Implementation of Binary Trees and operations of Binary Trees.							
9.	Implementation of Binary Search Trees.							
10.	Implementation of AVL Trees.							
11.	Implementation of Heaps using Priority Queues.							
12.	Graph representation and Traversal algorithms.							
13. various	Implement searching and sorting algorithms. Analyze and compare the tim algorithms with best, average and worst case inputs.	e ta	ken	for				

TOTAL: 60 PERIODS

1 1

OUTCOMES:

At the end of the course, the students will be able to:

CO1: Write functions to implement linear and non-linear data structure operations.

CO2: Suggest and use appropriate linear / non-linear data structure operations for solving a given problem.

CO3: Implement different operations of search trees.

CO4: Implement appropriate Graph representations and traversals to solve real-world applications.

CO5: Implement and analyze the various searching and sorting algorithms.

		T	T	Б	C		
21EL211 ADVANCED READING & WRITING				P	С		
	(Common to All Branches) 0 0 2						
OBJECTIVES:							
The Course	will enable learners to:						
• Strei	• Strengthen their reading skills.						
• Enha	ance writing skills with specific reference to technical writing.						
• App	ly their critical thinking skills.						
• Dem	onstrate their project and proposal writing.						
UNIT I					6		
Reading - S	trategies for effective reading - Writing - Descriptive essays- Predictin	g co	onte	nt			
using photo	S.	C					
UNIT II					6		
Reading - U	Jse of graphic organizers to review and aid comprehension - Writin	g -	Exp	osit	ory		
essays.		-	-		•		
UNIT III					6		
Reading - S	peed reading techniques - Writing - Elements of a good essay - Analyt	ical	essa	ays.			
UNIT IV	ENGINEERING COLLEGE				6		
Reading - G	enre and organization of ideas – Writing - Email writing - Job applica	tion	s.				
UNIT V				-	6		
Reading - Critical reading and thinking -Writing - Letter of recommendation - Vision statement.							
OUTCOMES.							
OUTCOM							
At the end	of this course, the students will be able to:						
CO1: Read and evaluate texts critically.							
CO2: Displ	ay critical thinking in various professional contexts.						
CO3: Apply	various texts using speed reading techniques.						
CO4: Illustr	rate and write different types of Essays.						
CO5: Write	effective emails, winning job applications and persuasive recommend	latio	ons.

SEMESTER III

DISCRETE MATHEMATICS

(Common to CSE and IT)

L	Т	Р	С
3	2	0	4

15

15

15

15

15

OBJECTIVES:

21MA302

- Validate the arguments by using connectives and rules of inference.
- Develop the knowledge on the basics of counting, solving recurrence relations.
- Demonstrate the fundamentals of graphs.
- Illustrate the functions, relations and group theory.
- Familiarize the concepts of lattices and Boolean algebra.

UNIT I LOGIC AND PROOFS

Propositional logic – Propositional equivalences – Predicates and quantifiers – Nested quantifiers – Rules of inference – Introduction to proofs – Proof methods and strategy.

UNIT II COMBINATORICS

Mathematical induction and well ordering – The basics of counting – The pigeonhole principle – Permutations and combinations – Recurrence relations – Solving linear recurrence relations – Generating functions – Inclusion and exclusion principle and its applications.

UNIT III GRAPH THEORY

Graphs and graph models – Graph terminology and special types of graphs – Matrix representation of graphs and graph isomorphism – Connectivity – Euler and Hamilton paths.

UNIT IV ALGEBRAIC STRUCTURES

Algebraic systems – Semi groups and monoids – Groups – Subgroups – Homomorphisms – Normal subgroup and cosets – Lagrange's theorem – Definitions and examples of Rings and Fields.

UNIT V LATTICES AND BOOLEAN ALGEBRA

Partial ordering – Posets – Lattices as posets – Properties of lattices - Lattices as algebraic systems – Sublattices – Direct product and homomorphism – Some special lattices – Boolean algebra.

TOTAL: 75 PERIODS

OUTCOMES:

At the end of this course, the students will be able to:

CO1: Examine the validity of the arguments.

CO2: Dmonstrate various proof techniques and application of principles.

CO3: Apply graph theory techniques to solve real life problems.

CO4: Identify algebraic techniques to formulate and solve group theoretic problems.

CO5: Utilize the significance of lattices and Boolean algebra in computer science and engineering.

9

9

OBJECTIVES:

- To understand and represent any given business problem statement in object-oriented notation.
- To have in depth knowledge on various Core Java API's and methods
- To become proficient in Hands on exercise, and able to show case smart programming using Java as Core platform
- To apply multithreaded programming using Java
- To understand JDBC

UNIT I INTRODUCTION

Description of the real world using the Objects Model - Classes, inheritance, interface, association, aggregation, composition with different aspect such as encapsulation, abstraction, polymorphism (static and runtime), access modifiers and multiple configurations - Quality software characteristics - Description of the Object-Oriented Analysis process vs. the Structure Analysis Model

UNIT II JAVA BASICS

Core Java Introduction, Object Oriented Programming in Core Java, Data Types, Auto and Un Boxing, Data Type Promotion, Inner and nested Classes, Control Statements, Logical Operators, abstract, super, final, static keywords

ARRAYS, COLLECTIONS AND EXCEPTION UNIT III

Arrays – One and Multi-Dimensional, Cloning, Sorting, Hashing Technique, Purpose of equals and hashcode methods, Collections- List (ArrayList, LinkedList, Vector, Stack), Properties, Set(HashSet, TreeSet, LinkedHashSet), Map(Treemap, hashmap, treemap), Queue (Priority Queue, DeQueue), Iteration, Ordering using Comparable and Comparator, Generics - Compile Time Type Safety, Upper and Lower Bounded, and with wild cards. Exception Handling -Checked and Un-Checked Exception, Custom Exception, Throws and Throw Keywords, Try-Catch-Finally, Try with Resources, Exception vs Runtime exception vs Throwable vs Error. 9

MULTITHREADING AND IO **UNIT IV**

Concurrency and Parallelism Programing, Runnable, Threads approach, Threads Life Cycle, Fork and Join, wait, sleep, notify and yield. Executor Framework with Callable and Runnable options, Concurrent locks, Synchronized Collections (Concurrent Map, synchronized List, synchronized Map, synchronized Set, synchronized SortedSet) Atomic data types (AtomicInteger, AtomicLong, AtomicIntegerArray), Count DownLatch, Blocking Queue Java IO - Files, Pipes, Streams, Byte and Char arrays, Readers and Writers, Input and Output Stream, Byte Array Input and Output, Buffer Input and output.

UNIT V FUNCTIONAL PROGRAMMING AND LAMBDA

9

Functional Programming (vs Object Oriented), imperative and declarative programming, Pure Functions, Functional Composition, Side Effects, Immutable, Java Functions and Predicates, Arrow Functions, @Functional interface, Higher Order Functions Streams API - Map, Filter, Reduce, Collect, Count, min and max Functions, Behavior as Parameterization, Seq and Parallel Streams, Converting a Array or File output as StreamsJDBC – DataSource, Configurations, Connection, Connection Pools, Driver Types, ResultSet, Prepared Statement, Named Parameter, Embedded SQL (Insert, Update, Delete, Join, union etc), ResultSet Navigation, Connection Close and Clean up.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of this course, the students will be able to:

CO1: Design and develop various applications in Java using OOD and Principles

CO2: Implement a given problem statement by selecting the right choice of options in Core Java.

CO3: Accomplish efficient programming in Core Java

CO4: Design and develop real time applications to process high volume of data with consistency and atomicity

CO5: Develop applications to Connect to Database using available thin drivers, and performs DDL operations

OPERATING SYSTEMS (Common to CSE and IT)

L	Т	Р	С
3	0	0	3

9

9

9

9

9

TOTAL: 45 PERIODS

OBJECTIVES:

- To explain the basic concepts of operating systems and process.
- To discuss threads and analyse various CPU scheduling algorithms.
- To describe the concept of process synchronization and deadlocks.
- To analyse various memory management schemes.
- To describe I/O management and file systems.

UNIT I INTRODUCTION TO OPERATING SYSTEMS AND PROCESSES

Introduction to OS –Computer system organization - architecture – Resource management -Protection and Security – Virtualization - Operating System Structures - Services - User and Operating-System Interface - System Calls - System Services -Design and Implementation -Building and Booting an Operating System - Process Concept - Process Scheduling - Operations on Processes – Inter process Communication - IPC in Shared-Memory Systems - IPC in Message-Passing Systems

UNIT II THREADS AND CPU SCHEDULING

Threads & Concurrency: Overview - Multicore Programming - Multithreading Models - Thread Libraries - Implicit Threading - Threading Issues - CPU Scheduling: Basic Concepts - Scheduling Criteria - Scheduling Algorithms - Thread Scheduling - Multi-Processor Scheduling - Real-Time CPU Scheduling

UNIT III PROCESS SYNCHRONISATION AND DEADLOCKS

Process Synchronization - The critical-section problem, Peterson's Solution - Synchronization hardware, Mutex locks, Semaphores, monitors, Liveness - Classic problems of synchronization – Bounded Buffer Problem - Reader's & Writer Problem, Dinning Philosopher Problem, Barber's shop problem. Deadlock - System model - Deadlock characterization, Methods for handling deadlocks - Deadlock prevention - Deadlock avoidance - Deadlock detection - Recovery from deadlock.

UNIT IV MEMORY MANAGEMENT

Memory Management: Contiguous Memory Allocation - Paging - Structure of the Page Table – Swapping - Virtual Memory: Demand Paging – Copy-on write – Page Replacement – Allocation of frames – Thrashing Memory – Compression

UNIT V FILE MANAGEMENT

File Management: File Concept – Access Methods – Directory Structure – Protection - Memory-Mapped File - Disk Management: Disk structure, Disk scheduling - FCFS, SSTF, SCAN, C-SCAN, Disk reliability, Disk formatting, Boot-block, Bad blocks - I/O Hardware: I/O devices, Device controllers, Direct Memory Access - Case Study-Linux.

OUTCOMES:

At the end of this course, the students will be able to:

CO1: Implement the basic concepts of operating systems and process.

CO2: Analyse various CPU scheduling algorithms and thread mechanism.

CO3: Implement the concepts of process synchronization and deadlocks.

CO4: Design various memory management schemes to given situation

CO5: Implement various I/O and file management techniques.

OBJECTIVES:

- To classify different types of Analog Modulation techniques, their principles.
- To infer the Principles of Data and Pulse Communication Systems.
- To understand and learn various digital communication techniques.
- To analyze and calculate the source and Error control coding.
- To illustrate and gain knowledge on multi-user radio communication.

UNIT I ANALOG COMMUNICATION

Introduction to Communication Systems, Modulation and its Types, Need for Modulation, Theory of Amplitude Modulation, Evolution and Description of SSB Techniques, Theory of Frequency and Phase Modulation, Comparison of Analog Communication Systems (AM – FM – PM).

UNIT II PULSE AND DATA COMMUNICATION

Pulse Communication: Pulse Amplitude Modulation (PAM), Pulse Time Modulation (PTM), Pulse Code Modulation (PCM), Comparison of various Pulse Communication System (PAM – PTM – PCM).

Data Communication: History of Data Communication, Standards Organizations for Data Communication, Data Communication Circuits, Data Communication Codes, Basics of Serial and Parallel Interfaces.

UNIT III DIGITAL COMMUNICATION

Amplitude Shift Keying (ASK), Frequency Shift Keying (FSK), Phase Shift Keying (PSK), Binary Phase Shift Keying (BPSK), Quadrature Phase Shift Keying (QPSK), Quadrature Amplitude Modulation (QAM) ,8 QAM, 16 QAM, Bandwidth Efficiency, Comparison of various Digital Communication System (ASK – FSK – PSK – QAM).

UNIT IV SOURCE AND ERROR CONTROL CODING

Entropy, Source Encoding Theorem, Shannon Fano Coding, Huffman Coding, Mutual Information, Channel Capacity, Error Control Coding, Linear Block Codes, Cyclic Codes, ARQ Techniques.

UNIT V MULTI-USER RADIO COMMUNICATION

Global System for Mobile Communications (GSM), Code Division Multiple Access (CDMA), Cellular Concept and Frequency Reuse, Channel Assignment and Handover Techniques, OFDM, Overview of Multiple Access Schemes, Principles of Satellite Technology.

TOTAL: 45 PERIODS

OUTCOMES:

Upon completion of the course, the student should be able to:

CO1: Analyze the different types of Analog Communication Systems.

CO2: Familiarize with Data Communication Techniques.

CO3: Explore the different types of Pulse Communication Techniques.

CO4: Analyze the various types of Digital Communication Schemes.

CO5: Solve Source Coding and Error Control Coding problems.

CO6: Apply the Principles of Multi-User Radio Communication.

TEXT BOOKS:

1. Wayne Tomasi, Electronic Communication Systems- Fundamental through Advanced, 5th Edition, Pearson Education, 2008.

2. Rappaport T.S, Wireless Communications: Principles and Practice, 2ndEdition, Pearson Education, 2010.

21IT311	OBJECT ORIENTED PROGRAMMINGLPRINCIPLES LABORATORY0	L	T.	P	C
2111311		4	2		
OBJECTIVES:					
• To build so	ftware development skills using Java for real-world applica	tions			
• To unders	tand and apply the concepts of classes, object, inheritance, p	olyn	norp	hism.	
• To develop	• To develop database applications.				
	TI TI				
LIST OF EVED	NICEC.				
LIST OF EACK	.1929:				
1. Implement	I. Implementation of an Application (such as Library Management System) using Classes,				
Objects, Construct	ors, Destructors and String Handling.				
2. Implement	ation of an Application such as Student Information System	usir	ng In	herita	ance,
Virtual Functions	and Abstract Classes.				
2 Develop a	Isua application using class and objects to generate Fleetr	inity	h ill	Cro	oto o

3. Develop a Java application using class and objects to generate Electricity bill. Create a class with the following members: Consumer no., consumer name, previous month reading, current month reading, type of EB connection (i.e domestic or commercial). Compute the bill amount using the following tariff. If the type of the EB connection is domestic, calculate the amount to be paid as follows:

- 4. First 100 units Rs. 1 per unit
- 5. 101-200 units Rs. 2.50 per unit
- 6. 201 -500 units Rs. 4 per unit
- 7. > 501 units Rs. 6 per unit
- 8. If the type of the EB connection is commercial, calculate the amount to be paid as follows:
- 9. First 100 units Rs. 2 per unit
- 10. 101-200 units Rs. 4.50 per unit
- 11. 201 -500 units Rs. 6 per unit
- 12. 501 units Rs. 7 per unit 2.

13. Develop a Java application to implement currency converter (Dollar to INR, EURO to INR, Yen to INR and vice versa), distance converter (meter to KM, miles to KM and vice versa), time converter (hours to minutes, seconds and vice versa) using packages.

14. Write a program to perform string operations using Array List. Write functions for the following a. Append - add at end b. Insert – add at particular index c. Search d. List all string starts with given letter

15. Write a Java Program to create an abstract class named Shape that contains two integers and an empty method named print Area (). Provide three classes named Rectangle, Triangle and Circle such that each one of the classes extends the class Shape. Each one of the classes contains only the method print Area () that prints the area of the given shape.

16. Write a Java program to implement user defined exception handling.

17. Write a Java program that reads a file name from the user, displays information about whether the file exists, whether the file is readable, or writable, the type of file and the length of the file in bytes.

18. Write a Java program that implements a multi-threaded application that has three threads. First thread generates a random integer every 1 second and if the value is even, second thread computes the square of the number and prints. If the value is odd, the third thread will print the value of cube of the number.

19. Write a Java program to find the maximum value from the given type of elements using a generic function.

20. Develop Java database application with Employee class with Emp_name, Emp_id, Address, Mail_id, Mobile_no as members. Inherit the classes, Programmer, Assistant Professor,

Associate Professor and Professor from employee class. Add Basic Pay (BP) as the member of all the inherited classes with 97% of BP as DA, 10 % of BP as HRA, 12% of BP as PF, 0.1% of BP for staff club fund. Generate pay slips for the employees with their gross and net salary.

TOTAL: 60 PERIODS

OUTCOMES:

At the end of this course, the students will be able to:

CO1: Develop and implement Java programs for simple applications that make use of classes, packages and interfaces.

CO2: Develop and implement Java programs with array list and exception handling.

CO3: Develop and implement Java programs with inheritance and polymorphism.

CO4: Design applications using file processing, generic programming and multithreaded programming.

CO5: Develop real-world applications using OOP Concepts.

OPERATING SYSTEMS LABORATORY (Common to CSE and IT)

Ĺ	Т	Р	С
0	0	4	2

OBJECTIVES:

- To practice system calls and shell programming
- To implement various CPU scheduling algorithms
- To build inter process communication deadlock detection and avoidance algorithms.
- To design page replacement and disk scheduling algorithms
- To implement file allocation strategies

LIST OF EXERCISES:

1. Basic Unix file system commands such as ls, cd, mkdir, rmdir, cp, rm, mv, more, lpr, man, grep, sed, etc.

- 2. Shell Programming
- 3. Programs for Unix System Calls.

a. Write a program to fetch the below information; Name of the operating system, Current release level, Current version level, Total usable main memory size, Available memory size, Amount of shared memory, Memory used by buffers, Total swap space size, and Swap space still available.

b. Use system calls to imitate the action of UNIX command "ls" with option -a, and -li command

c. Use system calls to imitate the action of UNIX command "cp" or "dir" with a couple of options

d. Implement process life cycle: Use the system calls fork(), exec(), wait(), waitpid(), exit(0), abort() and kill().

4. Write a program to implement the following actions using pthreads

a) Create a thread in a program and called Parent thread, this parent thread creates another thread (Child thread) to print out the numbers from 1 to 20. The Parent thread waits till the child thread finishes

b) Create a thread in the main program, this program passes the 'count' as an argument to that thread function and this created thread function has to print your name 'count' times

5. Process Synchronization using Semaphores. A shared data has to be accessed by two categories of processes namely A and B. Satisfy the following constraints to access the data without any data loss.

(i) When a process A1 is accessing the database another process of the same category is permitted.

(ii) When a process B1 is accessing the database neither process A1 nor another process B2 is permitted.

(iii) When a process A1 is accessing the database process B1 should not be allowed to access the database.

Write appropriate code for both A and B satisfying all the above constraints using semaphores. Note: The time-stamp for accessing is approximately 10 sec.

6. Implementation of IPC using Shared memory

a. Write a UNIX system call program to implement the following shared memory concept i) In process 1 - Creation a shared memory of size 5 bytes with read/write permission and

1) In process 1 - Creation a shared memory of size 5 bytes with read/write permission an enter balance amount of Rs 1000.

ii) In process 2 - Add Rs. 200 to your balance. During this modification maintain the atomicity of shared memory using binary semaphore

iii) In process 3 – Subtract Rs. 800 to your balance. During this also modification maintain the atomicity of shared memory using binary semaphore

iv) In process 4 – Display the current balance of shared memory v) Delete the shared memory

7. Implementation of IPC using message queue

a) Get the input data (integer value) from a process called sender

- b) Use Message Queue to transfer this data from sender to receiver process
- c) The receiver does the prime number checking on the received data

d) Communicate the verified/status result from receiver to sender process, This status should be displayed in the Sender process.

Note: Simultaneously execute two or more processes. Don't do it as a single process

8. Write C programs to implement the various CPU Scheduling Algorithms

- 9. Bankers Algorithm for Deadlock Avoidance
- 10.Implementation of Memory Allocation Methods for fixed partition
- 11.Implementation of Paging Technique of Memory Management
- 12.Implementation of Page Replacement Algorithms

13.Implementation of disk scheduling

14.Implementation of File Allocation Strategies

TOTAL: 60 PERIODS

э^нвяр

OUTCOMES:

At the end of the course, the students will be able to:

CO1: Practice system calls and shell programming

CO2: Implement various CPU scheduling algorithms

CO3: Build inter process communication deadlock detection and avoidance algorithms.

அறிவே

CO4: Design page replacement and disk scheduling algorithms

CO5: Implement file allocation strategies

21/08/21/2	APTITUDE AND CODING SKILLS – I	L	Т	P	С
2105515	(Common to All Branches)	0	0	2	1

OBJECTIVES:

- To develop vocabulary for effective communication and reading skills.
- To build the logical reasoning and quantitative skills.
- To develop error correction and debugging skills in programming.

List of Exercises:

1. English – Phase I

Vocabulary: Synonyms, Antonyms, Grammar: Subject-Verb Agreement, Tenses and Articles, Prepositions and Conjunctions, Speech and Voices, Comprehension: Inferential and Literal Comprehension, Contextual Vocabulary, Comprehension ordering

2. Logical Reasoning – Phase I

Deductive Reasoning: Coding deductive logic, Directional sense, Blood relations, Objective Reasoning, Selection decision tables, Puzzles, Inductive reasoning: Coding pattern and Number series pattern recognition, Analogy and Classification pattern recognition, Abductive Reasoning: Logical word sequence, Data sufficiency

3. Quantitative Ability - Phase I

Basic Mathematics: Divisibility, HCF and LCM, Numbers, decimal fractions and power, Applied Mathematics: Profit and Loss, Simple and Compound Interest, Time, Speed and Distance, Engineering Mathematics: Logarithms, Permutation and Combinations, Probability

TOTAL: 30 PERIODS

al a a a

4. Automata Fix – Phase I

Logical, Compilation and Code reuse

OUTCOMES:

At the end of this course, the students will be able to:

CO1: Develop vocabulary for effective communication and reading skills.CO2: Build the logical reasoning and quantitative skills.CO3: Develop error correction and debugging skills in programming.

	SEMESTER IV				
21MA301	PROBABILITY AND STATISTICS	L	Т	P	С
	(Common to CSE and IT)	3	2	0	4
OBJECTI	VES:				
The Course	will enable learners to:				
• Dete	ermine the probability value of one dimensional random variables.				
• Illus	trate the concepts of covariance, correlation and regression.				
• Disc	cuss the concept of testing of hypothesis for small and large samples.				
• Den	tion strate the difference between the types of design to experiments.				
• Iden	tilly and interpret the control charts for variables and attributes.				
UNIT I	ONE DIMENSIONAL RANDOM VARIABLES				15
Random va	riable – Discrete and continuous random variables – Moments – Mon	nent	gei	nera	ting
functions –	Binomial, Poisson, Geometric, Uniform, Exponential and Normal dist	ribu	tior	IS.	
UNIT II	TWO DIMENSIONAL RANDOM VARIABLES				15
Joint distrib	utions – Marginal and Conditional distributions – Covariance – Correl	atio	n an	d lir	iear
INIT III	TESTING OF HYPOTHESIS	-			15
Sampling d	istributions Estimation of parameters Statistical hypothesis Lar	<u></u>	ami	le t	Acte
based on N	ormal distribution for single mean and difference of means – Tests h	ge s asec	1 or	nt (Thi-
square and	F distributions for mean, variance and proportion – Contingency	tab	le (test	for
independen	t) – Goodness of fit.	,	(
UNIT IV	DESIGN OF EXPERIMENTS				15
One way and Two way classifications – Completely randomized design – Randomized block					
design – La	tin square design.	-	-	_	15
UNITV				-	15
Control cha	rts for measurements (XX and R charts) – Control charts for attribut	es (j	р, с	and	np
TOTAL: 75 PERIODS					
OUTCOM	ES:				
At the end	of this course, the students will be able to:				
CO1: Understand the fundamental knowledge of modern probability theory and standard					
distributions.					
CO2: Categorize the probability models and function of random variables based on one and two dimensional random variables					
CO3: Employ the concept of testing the hypothesis in real life problems.					
CO4: Implement the analysis of variance for real life problems.					
CO5: Apply the statistical quality control in engineering and management problems.

6. Thomas Connolly, Carolyn Begg, "Database Systems: A Practical Approach to Design, Implementation and Management", Pearson, 6th Edition, 2015.

OBJECTIVES:

The objective of the course is fourfold:

- Development of a holistic perspective based on self-exploration about themselves (human being), family, society and nature/existence.
- Understanding (or developing clarity) of the harmony in the human being, family, society and nature/existence
- Strengthening of self-reflection.
- Development of commitment and courage to act.

COURSE TOPICS:

The course has 28 lectures (2 lecture hours) and 14 practice sessions (2 Tutorial hour) in 5 Units:

UNIT I	Course Introduction - Need, Basic guidelines, Content and Process	
	for value Education	

- Purpose and motivation for the course, recapitulation from Universal Human Values-I
- Self-Exploration–what is it? Its content and process; 'Natural Acceptance' and Experiential Validation- as the process for self-exploration
- Continuous Happiness and Prosperity- A look at basic Human Aspirations
- Right understanding, Relationship and Physical Facility- The basic requirements for fulfilment of aspirations of every human being with their correct priority
- Understanding Happiness and Prosperity correctly- A critical appraisal of the current scenario
- Method to fulfil the above human aspirations: Understanding and living in harmony at various levels.

Include practice sessions to discuss natural acceptance in human being as the innate acceptance for living with responsibility (living in relationship, harmony and co-existence) rather than as arbitrariness in choice based on liking-disliking

UNIT II	Understanding Harmony in the Human Being – Harmony in
	Myself!

- Understanding human being as a co-existence of the sentient 'I' and the material 'Body'
- Understanding the needs of Self ('I') and 'Body' happiness and physical facility
- Understanding the body as an instrument of 'I' (I being the doer, seer and enjoyer)
- Understanding the characteristics and activities of 'I' and harmony in 'I'
- 'Understanding the harmony of I with the Body: Sanyam and Health; correct appraisal of Physical needs, meaning of Prosperity in detail
- Programs to ensure Sanyam and Health.

Include practice sessions to discuss the role others have played in making material goods available to me. Identifying from one's own life. Differentiate between prosperity and accumulation. Discuss programs for ensuring health vs dealing with disease

UNIT III	Understanding harmony in the family and society- Harmony in
	human-human relationship

- Understanding values in human-human relationship; meaning of Justice (nine universal values in relationships) and program for its fulfilment to ensure mutual happiness; Trust and Respect as the foundational values of relationship
- Understanding the meaning of Trust; Difference between intention and competence
- Understanding the meaning of Respect; Difference between respect and differentiation; the other salient values in relationship
- Understanding the harmony in the society (society being an extension of family): Resolution, Prosperity, Fearlessness (trust) and co-existence as comprehensive Human Goals
- Visualizing a universal harmonious order in society- Undivided society, Universal orderfrom family to world family.

Include practice sessions to reflect on relationships in family, hostel and institutes extended family, real life examples, teacher-student relationship, goal of education etc. Gratitude as a universal value in relationships. Discuss with scenarios. Elicit examples from students' lives.

	1 1	
UNIT IV	Understanding Harmony in the Nature and Existence - Whole	
	existence as coexistence	
- Understand	ing the hormony in nature	

- Understanding the harmony in nature
- Interconnectedness and mutual fulfilment among the four orders of nature-recyclability and self-regulation in nature
- Understanding Existence as Co-existence of mutually interacting units in all-pervasive space
- Holistic perception of harmony at all levels of existence.

Include practice sessions to discuss human being as cause of imbalance in nature (film "Home" can be used), pollution, depletion of resources and role of technology etc.

	-	_				
UNIT V		Implication	ns of the above	Holistic Un	derstanding of	Harmony on
		Profession	al Ethics			

- Natural acceptance of human values
- Definitiveness of Ethical Human Conduct
- Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order
- Competence in professional ethics: a. Ability to utilize the professional competence for augmenting universal human order b. Ability to identify the scope and characteristics of people friendly and eco-friendly production systems, c. Ability to identify and develop appropriate technologies and management patterns for above production systems.
- Case studies of typical holistic technologies, management models and production systems.
- Strategy for transition from the present state to Universal Human Order: a. At the level of individual: as socially and ecologically responsible engineers, technologists and managers b. At the level of society: as mutually enriching institutions and organizations
- Sum up.

Include practice exercises and case studies will be taken up in practice (tutorial) sessions eg. To discuss the conduct as an engineer or scientist etc.

OUTCOMES:

At the end of this course, the students will be able to:

CO1: Would become more aware of themselves, and their surroundings (family, society, nature).

CO2: Would become more responsible in life, and in handling problems with sustainable

solutions, while keeping human relationships and human nature in mind.

CO3: Would have better critical ability.

CO4: Would become sensitive to their commitment towards what they have understood (human values, human relationship, and human society).

CO5: Would be able to apply what they have learnt to their own self in different day-to-day settings in real life, at least a beginning would be made in this direction.

Software Requirement Analysis –Describe the individual Phases/modules of the project and Identify deliverables. Identify functional and non-functional requirements. Data Modelling –Use work products –data dictionary.

Software Designing -Develop use case diagrams and activity diagrams, build and test class

diagrams, sequence diagrams and add interface to class diagrams.

Prototype model –Develop the prototype of the product.

TOTAL: 45 + 30 = 75 PERIODS

OUTCOMES:

At the end of this course, the students will be able to:

CO1: Compare different process models.

CO2: Implement the agile methodologies for software development.

CO3: Apply the steps of requirements engineering process for Analysis Modeling.

CO4: Apply systematic procedure for software design and deployment.

CO5: Compare and contrast the various testing and maintenance.

CO6: Evaluate the key activities in managing a software project.

21IT411	WEB TECHNOLOGY LABORATORY		T	P	C
	720.	U	U	4	2
	PES: evelop III using HTML 5 and CSS3				
• To d	esign interactive web pages using Scripting languages.				
• To le	earn jQuery.				
1. Deve	elop an Wallet Application, that has following feature set				
•	Login and Logout				
	Wallet				
	• Add money to wallet				
	• Spend money from wallet				
	Wallet transaction list				
•	Services				
	Pay Mobile Bills – Post/Pre-Paid bills				
•	Pay Utility Bills				
•	Pay Corp/Water Taxes				
•	Pay via QR Code				
2. The man	above application has to be Responsive, ES6 has to be used, jQuipulate the DOM structure, Object Oriented Programming model	uery	mo	del	to
3. Emp	loy NodeJS to execute the above web application.				
	TOTAL:	60]	PER	IO	DS
OUTCOM	ES:				
At the end	of this course, the students will be able to:				
CO1: Desig	n simple web pages using markup languages like HTML and XHTML	/. 	-		
use.	top dynamic web pages using DHTML and Java script that is easy to n	avıg	ate a	ina	
CO3: Imple	ment server-side web pages that have to process request from client-si	de v	veb 1	page	es.

CO3: Implement server-side web pages that nave to process request from client-si **CO4:** Design and develop interactive and dynamic web pages using jQuery tool. **CO5:** Design and develop event driven web servers using NodeJS.

L	Т	Р	С
0	0	4	2

TOTAL: 60 PERIODS

OBJECTIVES:

- To understand data definitions and data manipulation commands
- To learn the use of nested and join queries
- To understand functions, procedures and procedural extensions of databases
- To be familiar with the use of a front-end tool
- To understand design and implementation of typical database applications

LIST OF EXPERIMENTS:

1. Data Definition Commands, Data Manipulation Commands for inserting, deleting, updating and retrieving Tables and Transaction Control statements

- 2. Database Querying Simple queries, Nested queries, Sub queries and Joins
- 3. Views, Sequences, Synonyms
- 4. Database Programming: Implicit and Explicit Cursors
- 5. Procedures and Functions
- 6. Triggers
- 7. Exception Handling
- 8. Database Design using ER modeling, normalization and Implementation for any application
- 9. Database Connectivity with Front End Tools
- 10. Case Study using real life database applications anyone from the following list
- a) Inventory Management for a EMart Grocery Shop
- b) Society Financial Management
- c) Cop Friendly App Eseva
- d) Property Management eMall
- e) Star Small and Medium Banking and Finance
- Build Entity Model diagram. The diagram should align with the business and functional goals stated in the application.
- Apply Normalization rules in designing the tables in scope.
- Prepared applicable views, triggers (for auditing purposes), functions for enabling enterprise grade features.
- Build PL SQL / Stored Procedures for Complex Functionalities, ex EOD Batch Processing for calculating the EMI for Gold Loan for each eligible Customer.
- Ability to showcase ACID Properties with sample queries with appropriate settings

๛๛

OUTCOMES:

At the end of this course, the students will be able to:

CO1: Apply typical data definitions and manipulation commands.

CO2: Design applications to test Nested and Join Queries.

CO3: Implement simple applications that use Views

CO4: Implement applications that require a Front-end Tool

CO5: Critically analyze the use of Tables, Views, Functions and Procedures.

L	Т	Р	С
0	0	2	1

OBJECTIVES:

- To develop advanced vocabulary for effective communication and reading skills.
- To build an enhanced level of logical reasoning and quantitative skills.
- To develop error correction and debugging skills in programming.
- To apply data structures and algorithms in problem solving.

List of Exercises:

1. English – Phase II

Vocabulary: Synonyms, Antonyms, Grammar: Subject-Verb Agreement, Tenses and Articles, Prepositions and Conjunctions, Speech and Voices, Comprehension: Inferential and Literal Comprehension, Contextual Vocabulary, Comprehension ordering

2. Logical Reasoning – Phase II

Deductive Reasoning: Coding deductive logic, Directional sense, Blood relations, Objective Reasoning, Selection decision tables, Puzzles, Inductive reasoning: Coding pattern and Number series pattern recognition, Analogy and Classification pattern recognition, Abductive Reasoning: Logical word sequence, Data sufficiency

3. Quantitative Ability - Phase II

Basic Mathematics: Divisibility, HCF and LCM, Numbers, decimal fractions and power, Applied Mathematics: Profit and Loss, Simple and Compound Interest, Time, Speed and Distance, Engineering Mathematics: Logarithms, Permutation and Combinations, Probability

4. Automata Fix – Phase II

Logical, Compilation and Code reuse

5. Automata -Phase II

Data Structure Concepts: Array and Matrices, Linked list, String processing and manipulation, Stack/Queue, Sorting and Searching

Advanced Design and Analysis Techniques: Greedy Algorithms, Minimum Spanning Trees, String Matching, Divide and Conquer, Computational Geometry

TOTAL: 30 PERIODS

OUTCOMES:

At the end of this course, the students will be able to:

CO1: Develop advanced vocabulary for effective communication and reading skills.

CO2: Build an enhanced level of logical reasoning and quantitative skills.

CO3: Develop error correction and debugging skills in programming.

CO4: Apply data structures and algorithms in problem solving.

SEMESTER V

21CS501	21CS501 COMPUTER NETWORKS		T	P	C	
	79.	3	U	U	3	
OBJECTIVE						
• To stu	dy the fundamental concepts of computer networks and physical la	ayer.				
• Io gai	In the knowledge of various protocols and techniques used in the d	ata li	INK I	ayer	•	
• To lea	• To learn the services of network layer and network layer protocols.					
	derstand the application layer protocols					
	INTRODUCTION AND PHYSICAL LAYER				9	
Data Commu	nications – Network Types – Protocol Lavering – Network Mode	ls (C). ST /	TCF	>/IP)	
Networking I	Devices: Hubs Bridges Switches – Performance Metrics – Trans	smis	sion	mea	lia -	
Guided media	-Unguided media- Switching-Circuit Switching - Packet Switching	אנונא. זע	JIOII	met	iiu	
UNIT II	DATA LINK LAYER	.8.			11	
Introduction -	- Link-Laver Addressing- Error Detection and Correction - DLC S	ervia	ces –	Dat	ta	
Link Layer Pi	cotocols – HDLC – PPP - Wired LANs: Ethernet - Wireless LANs	– In	trodu	ictic	on –	
IEEE 802.11,	Bluetooth EVENUE PUICE					
UNIT III	NETWORK LAYER				9	
Network Laye	er Services – Packet switching – Performance – IPV4 Addresses –	Forv	vard	ing	of	
IP Packets - N	Network Layer Protocols: IP, ICMP v4 – Unicast Routing Algorithm	ms –	Pro	toco	ols –	
Multicasting	Basics – IPV6 Addressing – IPV6 Protocol.					
UNIT IV	TRANSPORT LAYER				8	
Introduction -	- Transport Layer Protocols – Services – Port Numbers – User Dat	agra	m Pr	otoc	col	
-Transmissio	n Control Protocol – SCTP.					
UNIT V	APPLICATION LAYER				8	
Application la	ayer-WWW and HTTP – FTP – Email –Telnet –SSH – DNS – SN	MP				
	ΤΟΤΑ	L: 4	5 PE	RIC)DS	
OUTCOMES	S:					
At the end of	this course, the students will be able to:					
CO1: Unders	tand the fundamental concepts of computer networks and physical	laye	r.			
CO2: Gain ki	nowledge of various protocols and techniques used in the data link	laye	r.			
CO3: Learn t	he network layer services and network layer protocols.					
CO4: Unders	tand the various protocols used in the transport layer.					
CO5: Analyz	e the various application layer protocols.

9

9

TOTAL: 45 PERIODS

OBJECTIVES:

- Understand the Big Data Platform and its Use cases
- Provide an overview of Apache Hadoop
- Provide HDFS Concepts and Interfacing with HDFS
- Understand Map Reduce Jobs

UNIT I INTRODUCTION TO BIG DATA

Data Science – Fundamentals and Components –Types of Digital Data – Classification of Digital Data – Introduction to Big Data – Characteristics of Data – Evolution of Big Data – Big Data Analytics – Classification of Analytics – Top Challenges Facing Big Data – Importance of Big Data Analytics.

UNIT II DESCRIPTIVE ANALYTICS USING STATISTICS

Mean, Median and Mode – Standard Deviation and Variance – Probability – Probability Density Function – Percentiles and Moments – Correlation and Covariance – Conditional Probability – Bayes' Theorem – Introduction to Univariate, Bivariate and Multivariate Analysis – Dimensionality Reduction using Principal Component Analysis (PCA) and LDA.

UNIT III PREDICTIVE MODELING AND MACHINE LEARNING

Linear Regression – Polynomial Regression – Multivariate Regression – Bias/Variance Trade Off – K Fold Cross Validation – Data Cleaning and Normalization – Cleaning Web Log Data – Normalizing Numerical Data – Detecting Outliers – Introduction to Supervised And Unsupervised Learning – Reinforcement Learning – Dealing with Real World Data – Machine Learning Algorithms – Clustering.

UNIT IV BIG DATA HADOOP FRAMEWORK

Introducing Hadoop –Hadoop Overview – RDBMS versus Hadoop – HDFS (Hadoop Distributed File System): Components and Block Replication – Processing Data with Hadoop – Introduction to MapReduce – Features of MapReduce – Introduction to NoSQL: CAP theorem – MongoDB: RDBMS Vs MongoDB – Mongo DB Database Model – Data Types and Sharding – Introduction to Hive – Hive Architecture – Hive Query Language (HQL).

UNIT V PYTHON AND R PROGRAMMING

Python Introduction – Data types - Arithmetic - control flow – Functions - args - Strings – Lists – Tuples – sets – Dictionaries Case study: Using R, Python, Hadoop, Spark and Reporting tools to understand and Analyze the Real world Data sources in the following domain- financial, Insurance, Healthcare in Iris, UCI datasets.

OUTCOMES:

At the end of this course, the students will be able to:

CO1: Identify Big Data and its Business Implications.

CO2: List the components of Hadoop and Hadoop Eco-System

CO3: Access and Process Data on Distributed File System

CO4: Manage Job Execution in Hadoop Environment

CO5: Develop Big Data Solutions using Hadoop Eco System

TEXT BOOK:

1. EMC Education Services, Data Science and Big Data Analytics: Discovering, Analyzing, Visualizing and Presenting Data, Wiley Publishers, 2015. (Chapter 1 and Chapter 10)

OBJECT ORIENTED	SYSTEMS DESIGN
------------------------	----------------

L	Т	Р	С
3	0	0	3

9

9

9

OBJECTIVES:

21IT502

- The Course will enable learners to: •
- To understand and differentiate Unified Process from other approaches.
- To design with static UML diagrams.
- To design with the UML dynamic and implementation diagrams.
- To improve the software design with design patterns.
- To understand how OO Programming practice will help to build a manageable and extendable application.
- To understand the various semantics in Object Oriented such as Classes, Interface, Polymorphism, Association (Aggregation & Composition)

UNIFIED PROCESS AND USE CASE DIAGRAMS 9 UNIT I Introduction to OOAD with OO Basics - Unified Process - UML diagrams - Use Case - Case study - the Next Gen POS system, Inception - Use case Modelling - Relating Use cases - include, extend and generalization – When to use Use-cases 9

UNIT II STATIC UML DIAGRAMS

Elaboration – Domain Model – Finding conceptual classes and description classes – Associations - Attributes - Domain model refinement - Finding conceptual class Hierarchies - Aggregation and Composition - Class Diagram Relationship between sequence diagrams and use cases - When to use Class Diagrams

UNIT III	DYNAMIC AND IMPLEMENTATION UML DIAGRAMS	

Dynamic Diagrams - UML interaction diagrams - System sequence diagram Collaboration diagram – When to use Communication Diagrams – Relationship between sequence diagrams and use cases - State machine diagram and Modelling – When to use State Diagrams - Activity diagram (swim lane approach) – When to use activity diagrams.

Implementation Diagrams - UML package diagram - When to use package diagrams -Component and Deployment Diagrams – When to use Component and Deployment diagrams

UNIT IV DESIGN PATTERNS

Design Patters - SOLID Principle - Standard Architecture Principles - Java Blue Print Patterns -Structural. Behavioral and Creational Patterns - Reference Implementations

UNIT V **OOSD IMPLEMENTION**

Object Oriented Programming -- OOP Concepts in Java - Fundamental Programming- Classes -Constructors, methods -access specifiers - static members -Comments, Data Types, Variables, Operators, Control Flow, Arrays, Packages - JavaDoc comments, Inheritance - constructors in sub classes- abstract classes and methods- final methods and classes - Interfaces - defining an interface, implementing interface – Object cloning -inner classes, Immutability, Clone and Deep Clone

TOTAL: 45 PERIODS

OUTCOMES:

Upon completion of the course, the students will be able to:

CO1: Design a problem statement using OOD

CO2: Transform a given business requirement into Object Oriented Design using UML Modeling

CO3: Implement Static diagrams and Dynamic modeling using UML Modeling.

CO4: To build an extendable and scalable solution using Design patterns.

CO5: Represent Business relationship using classes and objects entrepreneurship.

CO6: To apply instances of inheritance, polymorphism, association, and contracts based interface etc

भुष्भुष्भुष

OBJECTIVES:

• To explore various network commands in different Operating Systems and troubleshoot it.

• To implement the error detection & correction and flow control mechanisms in network data communication.

- To implement functionalities using raw sockets.
- To understand and implement the network programming concepts using APIs.
- To simulate various network protocols and analyze their behaviour in the network

LIST OF EXERCISES:

1. Practice different network commands available in Windows and Linux Operating Systems and troubleshoot the network.

- 2. Network configuration commands using Linux.
- 3. Error detection and correction mechanisms.
- 4. Flow control mechanisms.
- 5. Multi-client chatting in TCP and UDP using Socket programming (C / Java)
- 6. Implementation of HTTP, Web Caching, FTP using socket programming.
- 7. Develop a DNS client server to resolve the given host name or IP address.
- 8. Simulation of unicast routing protocols.

9. Observing Packets across the network and Performance Analysis of various Routing protocols.

10. Simulation of Transport layer Protocols and analysis of congestion control techniques in the network.

TOTAL: 60 PERIODS

OUTCOMES:

At the end of this course, the students will be able to:

CO1: Understand the various networking commands in different OS and troubleshoot it.

CO2: Perform error detection & correction and flow control mechanisms in network programming.

CO3: Program with raw sockets for network protocol implementation.

CO4: Understand the usage of various network programming APIs and application layer protocols.

CO5: Simulate various network protocols and analyze their behaviour in the network

OBJECTIVI	ES:			I	L	
• To under	• To understand business problem statement in object-oriented notation					
• Be expos	ed to the UML Diagrams					
• To build	a manageable and extendable application.					
• To under	stand the various semantics in Object Oriented such as Classes,	In	terfac	ce,		
Polymor	phism, Association (Aggregation and Composition)					
LIST OF EX	ERCISES:					
To de	velop a mini-project by using the following Use Cases listed belo	w.				
Use C	ase 1					
	POS (Point of Sale) Terminal					
	Features to be handled:-					
1.	Order Entry,					
2.	Item Management and Categorization,					
3.	Tax Calculation,					
4.	Payment Mode, Payment Status, User Management					
Use C	ase 2					
	Hotel Room Management					
	Features to be handled:-					
1.	Rooms type and Category					
2.	Check in and Check Out					
3.	Room occupation Status					
4.	Room Service Request					
5.	Guests Management and allocation Room					
6.	Billing Calculation, User management					
Use C	ase 3					
	Banking Portal					
	1. Funds Transfer within Same Bank, Intra Bank					
	2. Forex Conversion					
	3. Bene Management					
	4. Customer and Accounts Management					
Line C	5. Funds Transfer Transaction Status					
Use C	ase 4					
	e Phone Derts Management					
1. WIOOII 2. Makii	e i none rans management					
$\begin{array}{c ccccccccccccccccccccccccccccccccccc$	e i none woulds					
	a Request Status Check					
4. Servic	a Request Engineer Allocation					
6 Pavm	ent					
7 Custo	mer Management					
7. Custo						

OUTCOMES:

At the end of this course, the students will be able to:

CO1: Develop and implement simple applications that make use of classes, packages and interfaces.

- **CO2:** Develop and implement the above application using exception handling.
- **CO3:** Develop and implement above application with inheritance and polymorphism.
- **CO4:** Develop real-world applications using OOP Concepts.

21IT512

BIG DATA ANALYTICS LABORATORY

L	Т	Р	С
0	0	4	2

OBJECTIVES:

- To understand the Big Data Platform and its Use cases
- To an overview of Apache Hadoop
- To understand HDFS Concepts and Interfacing with HDFS
- To Understand Map Reduce Jobs
- To understand design and implementation of Big Data applications

LIST OF EXPERIMENTS:

Software

- Hadoop •
- Hive and Hbase
- Apache Spark

Dataset:-

- Mock Data •
- Connecting with Data generators (like Social Apps, Application Logs, custom data generators etc)

PREREQUISITES:

- Installation of Hadoop Framework, it's components and study the HADOOP ecosystem.
- Write a program to implement word count program using Map Reduce
- Write a program to implement Matrix multiplication using Map-Reduce
- Install and configure MongoDB/ Cassandra/HBase/Hypertable to execute NoSQL • commands.
- Implementing DGIM algorithm using any Programming Language
- Implement Bloom Filter using any programming language
- Implement and Perform HIVE for data analysis of twitter data, chat data, weblog analysis.
- Implement K-Means Clustering algorithm using Map-Reduce. அக்கம

USE CASES:

- Real Time Traffic Control using Big Data
- Medical Insurance Fraud Detection
- Data Warehouse Design for an E-Commerce Site
- Credit Card Anomalies Detection
- **Disease Prediction Based on Symptoms**
- **Real Time Application Server Logs Analysis**

The details of the use cases will be provided to the students through lab manual.

OUTCOMES:

At the end of this course, the students will be able to:

CO1: Identify the key issues in big data management and experiment with Hadoop framework. **CO2:** Develop problem solving and critical thinking skills in fundamental enable techniques like Hadoop and Map Reduce.

CO3: Construct and Explain with structure and unstructured data by using NoSQL commands. **CO4:** Analyze the algorithms of big data analytics in various applications like recommender systems, social media applications.

L

0

OBJECTIVES:

- To develop vocabulary for effective communication and reading skills.
- To build the logical reasoning and quantitative skills.
- To develop error correction and debugging skills in programming.

LIST OF EXERCISES:

1. English – Phase I Advanced

Vocabulary: Synonyms, Antonyms, Grammar: Subject-Verb Agreement, Tenses and Articles, Prepositions and Conjunctions, Speech and Voices, Comprehension: Inferential and Literal Comprehension, Contextual Vocabulary, Comprehension ordering

2. Logical Reasoning – Phase I Advanced

Deductive Reasoning: Coding deductive logic, Directional sense, Blood relations, Objective Reasoning, Selection decision tables, Puzzles, Inductive reasoning: Coding pattern and Number series pattern recognition, Analogy and Classification pattern recognition, Abductive Reasoning: Logical word sequence, Data sufficiency

3. Quantitative Ability - Phase I Advanced

Basic Mathematics: Divisibility, HCF and LCM, Numbers, decimal fractions and power, Applied Mathematics: Profit and Loss, Simple and Compound Interest, Time, Speed and Distance, Engineering Mathematics: Logarithms, Permutation and Combinations, Probability

4. Automata Fix – Phase I

Logical, Compilation and Code reuse

TOTAL: 30 PERIODS

are erection

OUTCOMES:

At the end of this course, the students will be able to:

CO1: Develop vocabulary for effective communication and reading skills.

CO2: Build the logical reasoning and quantitative skills.

CO3: Develop error correction and debugging skills in programming.

CLOUD COMPUTING

L	Т	Р	С
3	0	0	3

9

9

9

9

OBJECTIVES:

- To understand the concepts and technologies of cloud computing.
- To have knowledge on the various types of cloud computing services.
- To describe the cloud infrastructure and virtualization.
- To describe high-level automation and orchestration systems that manage the virtualized infrastructure.
- To describe the programming paradigms used in cloud and how cloud software deployments scale to large numbers of users.

UNIT I **INTRODUCTION**

Introduction to Cloud Computing - Definition of Cloud Computing - Characteristics of Cloud Computing - Cloud Models - Cloud Services Examples - Cloud-based Services & Applications.

Cloud Concepts & Technologies: Virtualization - Load Balancing - Scalability & Elasticity -Deployment - Replication - Monitoring - Software Defined Networking - Network Function Virtualization – MapReduce - Identity and Access Management - Service Level Agreements – Billing. 9

CLOUD SERVICES AND PLATFORMS UNIT II

Compute Services – Storage Services – Database Services – Application Services – Content Delivery Services – Analytics Services – Deployment and Management Services – Identity and Access Management Services - Open Source Private Cloud Software.

CLOUD INFRASTRUCTURE AND VIRTUALIZATION UNIT III

Data Center Infrastructure and Equipment - Virtual Machines - Containers - Virtual Networks -Virtual Storage: Persistent storage – NAS Technology- SAN Technology – Mapping virtual disks to physical disks - Object Storage.

AUTOMATION AND ORCHESTRATION UNIT IV

Automation - Orchestration: Automated Replication and Parallelism - The MapReduce Paradigm: The MapReduce Programming Paradigm – Splitting Input – Parallelism and Data size – Data access and Data Transmission – Apache Hadoop – Parts of Hadoop – HDFS Components – Block Replication and Fault Tolerance – HDFS and MapReduce.

UNIT V **CLOUD PROGRAMMING PARADIGMS**

Microservices - Serverless Computing and Event Processing - DevOps: Software Creation and Development – Software Development Cycle – The DevOps Approach – Continuous Integration – Continuous Delivery - Deployment.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of this course, the students will be able to:

CO1: Articulate the main concepts and key technologies of cloud computing.

CO2: Learn various cloud services and platforms to cater the requirements in the growth of the businesses.

CO3: Develop the ability to understand the cloud infrastructure and virtualization that help in the development of cloud.

CO4: Explain the high-level automation and orchestration systems that manage the virtualized infrastructure.

CO5: Summarizes the programming paradigms used in cloud and how cloud software deployments scale to large numbers of users.

9

SPRUCING UP MOBILE APPS AND TESTING

Graphics and animation - custom views, canvas, animation APIs, multimedia - audio/video playback and record location awareness- native hardware access (sensors such as accelerometer and gyroscope). Debugging mobile apps- App Test procedure - test automation of mobile apps- JUnit for

Activity- states and life cycle, interaction amongst activities-App functionality beyond user interface - Threads, Async task, Services – states and lifecycle, Notifications, Broadcast receivers, Telephony and SMS, network and security

App user interface designing – mobile UI resources (Layout, UI elements, Drawable, Menu),

UNIT III

• Explain Android Architecture and various mobile platforms Develop Android application with basic building blocks

• Explain the development of app for iOS and Windows platform GETTING STARTED WITH MOBILITY

BUILDING BLOCKS OF MOBILE APPS

Test the developed app and publishing for users

9 Android - Versioning, signing and packaging mobile apps, distributing apps on mobile market place

CROSS PLATFORM APP DEVELOPMENT - I UNIT IV

Introduction cross platform development -XAMARIN - XMAL - XMARIN FORMS - XAMARIN. **IOS – XAMARIN.WINDOWS**

CROSS PLATFORM APP DEVELOPMENT - II UNIT V

Develop a Web application using Angular and try converting the same into mobile using nativescript framework

Hands-on

- Setting up android and android emulator ٠
- Creating UI element Layout
- Creating UI element Button ٠
- Creating UI element Menu
- **Demonstrating Thread**
- **Demonstrating Services**
- Creating Animation view and canvas
- Listing the sensors used in mobile phone •
- Creating .apk file and publishing
- Creating simple application using XAMARIN
- Creating simple Angular application using native-script •

MOBILE ARCHITECTURE AND DEVELOPMENT

Familiarize in the Graphics and Multimedia used for Android application development

Mobility landscape- Mobile platform- Mobile apps development, Overview of Android platformsetting up the mobile app development environment along with an emulator- case study on Mobile

21CS614 ADVANCED APTITUDE AND CODING SKILLS - II

L	Τ	Р	С
0	0	2	1

OBJECTIVES:

- To develop advanced vocabulary for effective communication and reading skills.
- To build an enhanced level of logical reasoning and quantitative skills.
- To develop error correction and debugging skills in programming.
- To apply data structures and algorithms in problem solving.

LIST OF EXERCISES:

1.English – Phase II Advanced

Vocabulary: Synonyms, Antonyms, Grammar: Subject-Verb Agreement, Tenses and Articles, Prepositions and Conjunctions, Speech and Voices, Comprehension: Inferential and Literal Comprehension, Contextual Vocabulary, Comprehension ordering

2. Logical Reasoning – Phase II Advanced

Deductive Reasoning: Coding deductive logic, Directional sense, Blood relations, Objective Reasoning, Selection decision tables, Puzzles, Inductive reasoning: Coding pattern and Number series pattern recognition, Analogy and Classification pattern recognition, Abductive Reasoning: Logical word sequence, Data sufficiency

3. Quantitative Ability - Phase II Advanced

Basic Mathematics: Divisibility, HCF and LCM, Numbers, decimal fractions and power, Applied Mathematics: Profit and Loss, Simple and Compound Interest, Time, Speed and Distance, Engineering Mathematics: Logarithms, Permutation and Combinations, Probability

4. Automata Fix – Phase II

Logical, Compilation and Code reuse

5. Automata - Phase II

Data Structure Concepts: Array and Matrices, Linked list, String processing and manipulation, Stack/Queue, Sorting and Searching Advanced Design and Analysis Techniques: Greedy Algorithms, Minimum Spanning Trees, String Matching, Divide and Conquer, Computational Geometry

OUTCOMES:

TOTAL: 30 PERIODS

At the end of this course, the students will be able to:

CO1: Develop advanced vocabulary for effective communication and reading skills.

CO2: Build an enhanced level of logical reasoning and quantitative skills.

CO3: Develop error correction and debugging skills in programming.

CO4: Apply data structures and algorithms in problem solving.

SEMESER VII

21IT711	PROFESSIONAL READINESS FOR INNOVATION,		Т	Р	С
	EMPLOYABILITY AND ENTREPRENEURSHIP	0	0	6	3
ODIECTI					

OBJECTIVES:

• To empower students with overall Professional and Technical skills required to solve a real world problem.

• To mentor the students to approach a solution through various stages of Ideation, Research, Design Thinking, workflows, architecture and building a prototype in keeping with the end-user and client needs.

• To provide experiential learning to enhance the Entrepreneurship and employability skills of the students.

HIGHLIGHTS OF THIS COURSE

This course is a four months immersive program to keep up with the industry demand and to have critical thinking, team based project experience and timely delivery of modules in a project that solves world problems using emerging technologies.

To prepare the students with digital skills for the future, the Experiential Project Based Learning is introduced to give them hands-on experience using digital technologies on open-source platforms with an end-to-end journey to solve a problem. By the end of this course, the student understands the approach to solve a problem with team collaboration with mentoring from Industry and faculties. **This is an EEC category course offered as an elective, under the type, "Experiential Project Based Learning"**.

Highlights of this course

- Students undergo training on emerging technologies
- Students develop solutions for real-world use cases
- Students work with mentors to learn and use industry best practices
- Students access and use Self-Learning courses on various technologies, approaches and methodologies.
- Collaborate in teams with other students working on the same topic
- Have a dedicated mentor to guide
- •

The course will involve 40-50 hours of technical training, and 40-50 hours of project development. The activities involved in the project along with duration are given in Table 1.

TABLE 1: ACTIVITIES						
Activity Name	Activity Description	Time(weeks)				
Choosing a Project	Selecting a project from the list	2				
	of projects categorized various					
	technologies and business					
	domains					
eam Formation	Students shall form a team of 4	1				
	members before enrolling to a					
	project. Team members shall					
	distribute the project activities					
	among themselves					
ndson Training	Students will be provided with	2				
	hands-on training on selected					
	technology in which they are	lüt				
	going to develop the project					
ject Development	Project shall be developed in	6				
	agile mode. The status of the					
	projects shall be update to the					
	mentor via appropriate	∞				
	platform					
e Submission, Project Doc	Project Deliverables must	3				
Demo	include the working code,					
	project document and					
	demonstration video. All the					
	project deliverables are to be	1				
	uploaded cloud base	μ πIU				
9	repository such as GitHub	haioin				
ntor Review and Approval	Mentor will be reviewing the	1				
	project deliverables as per the					
	milestones schedule and the					
	feedback will be provided to					
	the team.					

Evaluat	ion and scoring	Evaluators will be assigned to	1	
		the team to valuate the project		
		deliverables, and the scoring		
		will be provided based on the		
		evaluation metrics		
TOTA	L		16 Weeks	

OUTCOMES:

On completion of the course, the students will be able to:

- Upskill in emerging technologies and apply to real industry-level use cases
- Understand agile development process
- Develop career readiness competencies, Team Skills / Leadership qualities
- Develop Time management, Project management skills and Communication Skills
- Use Critical Thinking for Innovative Problem Solving
- Develop entrepreneurship skills to independently work on products

OBJECTIVES:

• To develop an understanding and awareness how issues such as content, information architecture, motion, sound, design, and technology merge to form effective and compelling interactive experiences for a wide range of audiences and end users.

• To become familiar with various software programs used in the creation and implementation of multi- media

- To appreciate the importance of technical ability and creativity within design practice.
- To gain knowledge about graphics hardware devices and software used.
- To understand the two-dimensional graphics and their transformations.
- To understand the three-dimensional graphics and their transformations.
- To appreciate illumination and color models
- To become familiar with understand clipping techniques
- To become familiar with Blender Graphics

UNIT I ILLUMINATION AND COLOR MODELS

Light sources - basic illumination models – halftone patterns and dithering techniques; Properties of light - Standard primaries and chromaticity diagram; Intuitive colour concepts - RGB colour model - YIQ colour model - CMY colour model - HSV colour model - HLS colour model; Colour selection. Output primitives – points and lines, line drawing algorithms, loading the frame buffer, line function; circle and ellipse generating algorithms; Pixel addressing and object geometry, filled area primitives.

UNIT II TWO-DIMENSIONAL GRAPHICS

Two dimensional geometric transformations – Matrix representations and homogeneous coordinates, composite transformations; Two dimensional viewing – viewing pipeline, viewing coordinate reference frame; window-to-viewport coordinate transformation, Two dimensional viewing functions; clipping operations – point, line, and polygon clipping algorithms.

UNIT III THREE-DIMENSIONAL GRAPHICS

Three dimensional concepts; Three dimensional object representations – Polygon surfaces- Polygon tables- Plane equations - Polygon meshes; Curved Lines and surfaces, Quadratic surfaces; Blobby objects; Spline representations – Bezier curves and surfaces -B-Spline curves and surfaces. TRANSFORMATION AND VIEWING: Three dimensional geometric and modeling transformations – Translation, Rotation, Scaling, composite transformations; Three dimensional viewing – viewing pipeline, viewing coordinates, Projections, Clipping; Visible surface detection methods.

UNIT IV	MULTIMEDIA SYSTEM DESIGN & MULTIMEDIA FILE	9
	HANDLING	1

Multimedia basics – Multimedia applications – Multimedia system architecture – Evolving technologies for multimedia – Defining objects for multimedia systems – Multimedia data interface standards – Multimedia databases. Compression and decompression – Data and file format standards – Multimedia I/O technologies – Digital voice and audio – Video image and animation – Full motion video – Storage and retrieval technologies

UNIT V HYPERMEDIA

Multimedia authoring and user interface - Hypermedia messaging - Mobile messaging – Hypermedia message component – Creating hypermedia message – Integrated multimedia message standards – Integrated document management – Distributed multimedia systems.

CASE STUDY: BLENDER GRAPHICS Blender Fundamentals – Drawing Basic Shapes –

Modeling – Shading and Textures

TOTAL: 45 PERIODS

OUTCOMES:

At the end of the course, the students should be able to:

CO1: Design two dimensional and three dimensional graphics.

CO2: Apply two dimensional and three dimensional transformations.

CO3: Apply Illumination and color models.

CO4: Apply clipping techniques to graphics.

CO5: Understood Different types of Multimedia File Format

CO6: Design Basic 3D Scenes using Blender

TEXTBOOK:

1. Donald Hearn and Pauline Baker M, "Computer Graphics", Prentice Hall, New Delhi, 2007 [UNIT I – III]

2. Andleigh, P. K and Kiran Thakrar, "Multimedia Systems and Design", PHI, 2003. [UNIT IV, V]

3. https://www.blender.org/support/tutorials/

21IT906

OBJECTIVES:

- To describe the different backup and recovery topologies and their role in providing disaster recovery and business continuity capabilities.

• To understand the basic components of Storage System Environment. • To understand the Storage Area Network Characteristics and Components.

• To und	lerstand the local and remote replication technologies.	
UNIT I	STORAGE SYSTEMS	9
Introduction	to Information Storage and Management: Information Storage, Evolution of	f Storage
Technology a	and Architecture, Data Center Infrastructure, Key Challenges in Managing Info	ormation,
Information	Lifecycle. Storage System Environment: Components of the Host.	RAID:
Implementati	on of RAID, RAID Array Components, RAID Levels, RAID Comparison	n, RAID
Impact on D	bisk Performance, Hot Spares. Intelligent Storage System: Components, Ir	ntelligent
Storage Array	y.	
UNIT II	STORAGE NETWORKING TECHNOLOGIES	9
Direct-Attach	ned Storage and Introduction to SCSI: Types of DAS, DAS Benefits and Lin	nitations,
Disk Drive	Interfaces, Introduction to Parallel SCSI, SCSI Command Model. Stora	ge Area
Networks: Fi	ber Channel, SAN Evolution, SAN Components, Fiber Channel Connectivi	ty, Fiber
Channel Port	ts, Fiber Channel Architecture, Zoning, Fiber Channel Login Types, Fiber	Channel
Topologies. 1	Network Attached Storage: Benefits of NAS, NAS File I/Components of NA	AS, NAS
Implementati	ons, NAS-Implementations, NAS File Sharing Protocols, NAS I/O Operation	IS.
UNIT III	ADVANCED STORAGE NETWORKING AND VIRTUALIZATION	9
IP SAN: iSC	SI, FCIP. Content-Addressed Storage: Fixed Content and Archives, Types of	f Archives,
Features and	Benefits of CAS, CAS Architecture, Object Storage and Retrieval in C	CAS, CAS
Examples. St	torage Virtualization: Forms of Virtualization, NIA Storage Virtualization	Гахопоту,
Storage Vir	tualization Configurations, Storage Virtualization Challenges, Types of	of Storage
Virtualization	n.	
UNIT IV	BUSINESS CONTINUITY	9
Introduction	to Business Continuity: Information Availability, BC Terminology, BC Plann	ing
T 10 1 F		

Lifecycle, Failure Analysis, Business Impact Analysis, BC Technology Solutions. Backup and Recovery: Backup Purpose, Considerations, Granularity, Recovery Considerations, Backup Methods and Process, Backup and Restore Operations, Backup Topologies, Backup in NAS Environments, Backup Technologies.

UNIT V REPLICATION

Local Replication: Source and Target, Uses of Local Replicas, Data Consistency, Local Replication Technologies, Restore and Restart Considerations, Creating Multiple Replicas, Management Interface. Remote Replication: Modes of Remote Replication and its Technologies, Network Infrastructure.

TOTAL: 45 PERIODS

OUTCOMES:

On Successful completion of the course, Students will be able to

CO1: Understand the logical and physical components of a Storage infrastructure.

9

CO2: Evaluate storage architectures, including storage subsystems, DAS, SAN, NAS, and CAS.

CO3: Understand the various forms and types of Storage Virtualization.

CO4: Describe the different role in providing disaster recovery and business continuity capabilities. **CO5:** Distinguish different remote replication technologies.

TEXTBOOK:

OUTCOMES:

At the end of the course, the students should be able to:

CO1: Understand the concepts of JEE and build tools like maven.

CO2: Apply core Technologies in real world application

CO3: Demonstrate real world application in different frameworks like spring and spring MVC

CO4: Apply logging process and spring security in real world applications

LIST OF EXERCISES:

Prerequisites:

- Developing simple application in Maven. 1.
- 2. Implement Spring IOC.
- 3. Implement Spring JDBC.
- Create a web application using Spring MVC. 4.
- 5. Implement Data Persistence using JPA and Hibernate.
- Creating RESTFUL services and Test using Postman or SoapUI 6.
- 7. Usage of Java Naming and Directory Interface
- 8. Implement Logging using Log4j.
- Implement Spring Security using JWT and OAUTH2 9.

Use Cases:

- Star Small and Medium Banking and Finance 1.
- Inventory Management for a EMart Grocery Shop 2.
- Society Financial Management 3.
- 4. Cop Friendly App - ESeva
- 5. Property Management - eMall
- Details of use cases will be provided to the students through Lab Manual

TOTAL: 45 PERIODS

OBJECTIVES:

- To learn the architecture and programming of ARM processor.
- To become familiar with the embedded computing platform design and analysis
- To impart the knowledge about real time embedded systems
- To learn embedded programming.
- To study and develop the different applications.

UNIT I INTRODUCTION TO EMBEDDED COMPUTING AND ARM PROCESSORS

Complex systems and microprocessors– Embedded system design process –Design example: Model train controller - Instruction sets preliminaries - ARM Processor CPU: programming input and output- supervisor mode, exceptions and traps – Co-processors- Memory system mechanisms – CPU performance- CPU power consumption.

UNIT II EMBEDDED COMPUTING PLATFORM DESIGN

The CPU Bus-Memory devices and systems–Designing with computing platforms – consumer electronics architecture – platform-level performance analysis - Components for embedded programs- Models of programs- Assembly, linking and loading – compilation techniques-Program level performance analysis – Software performance optimization – Program level energy and power analysis and optimization – Analysis and optimization of program size- Program validation and testing.

UNIT III PROGRAMMING CONCEPTS AND EMBEDDED PROGRAMMING

Software Programming in ALP and in High Level Language "C"- C Program Elements –Object Oriented Programming – Embedded Programming In C++ - Embedded Programming in JAVA-Program Modelling Concepts: Program Models, DFG Models, State Machine Programming Models-Modelling of Multiprocessor Systems – UML Modelling.

UNIT IV REAL TIME OPERATING SYSTEMS

OS Services – Process Management – Timer Functions – Event Functions – Memory Management – Device, File and IO Subsystems Management – Basic Design Using an RTOS – RTOS Task Scheduling Models, Interrupt Latency and Response of the Tasks as Performance Metrics – OS Security Issues.

UNIT V REAL TIME OPERATING SYSTEM PROGRAMMING

Basic functions & Types of RTOSES- RTOS mCOS-II - RTOS Vx works – Windows CE, OSEK, Linux 2.6.x and RTLinux

OUTCOMES:

At the end of this course, the students will be able to:

CO1: Describe the architecture and programming of ARM processor.

CO2: Explain the concepts of embedded systems.

CO3: Write embedded C programs.

CO4: Understand the RTOS and its use in Portable Handheld Devices

CO5: Design real time embedded systems using the concepts of RTOS.

TEXT BOOKS:

2111919	DIGITAL IMAGE PROCESSING	3	0	0	3
OBJECTIV	ES:			I	
• To become	familiar with digital image fundamentals				
• To get expo	sed to simple image enhancement techniques in Spatial and Frequency d	oma	in.		
• To learn con	ncepts of degradation function and restoration techniques				
• To study the	e image segmentation and representation techniques				
• To become	familiar with image compression and recognition methods				
UNIT I	DIGITAL IMAGE FUNDAMENTALS		9		
Steps in Digit	tal Image Processing - Components - Elements of Visual Perception - Im	age S	Sensi	ng a	and
Acquisition –	Image Sampling and Quantization – Relationships between pixels - Color imag	ge fur	ıdam	enta	ls -
RGB, HSI mo	dels, Two-dimensional mathematical preliminaries, 2D transforms - DFT, DCT	`.			
UNIT II	IMAGE ENHANCEMENT		9		
Spatial Domain: Gray level transformations – Histogram processing – Basics of Spatial Filtering– Smoothing and Sharpening Spatial Filtering, Frequency Domain: Introduction to Fourier Transform– Smoothing and Sharpening frequency domain filters – Ideal, Butterworth and Gaussian filters. Homomorphic filtering. Color image enhancement					
UNIT III	IMAGE RESTORATION		9		
Image Restor	ation - degradation model, Properties, Noise models – Mean Filters – O	rder	Stati	istic	s –
Adaptive filte Inverse Filter	ers – Band reject Filters – Band pass Filters – Notch Filters – Optimum N ring – Wiener filtering	otch	Filt	ering	g —
UNIT IV	IMAGE SEGMENTATION		9		
Edge detection, Edge linking via Hough transform – Thresholding - Region based segmentation – Region growing – Region splitting and merging – Morphological processing- erosion and dilation, Segmentation by morphological watersheds – basic concepts – Dam construction – Watershed					
UNIT V	IMAGE COMPRESSION AND RECOGNITION		9		
Need for data compression, Huffman, Run Length Encoding, Shift codes, Arithmetic coding, JPEG standard, MPEG. Boundary representation, Boundary description, Fourier Descriptor, Regional Descriptors – Topological feature, Texture - Patterns and Pattern classes - Recognition based on matching.					
	TOTAL: 4	5	PER	lOI	DS
OUTCOMES	S:				
At the end of	the course, the students should be able to:				
CO1: Know and understand the basics and fundamentals of digital image processing, such as					
digitization, sampling, quantization, and 2D-transforms.					
CO2: Operat	e on images using the techniques of smoothing, sharpening and enhance	ment	•		
CO4: Loore	stand the restoration concepts and filtering techniques.	ion	noth	od-	for
CO4: Learn	the basics of segmentation, reatures extraction, compression and recognit	ion n	netne	JUS	or

color models.

211T939	ADVANCED DATABASES	L	Т	P	С	
		3	0	0	3	
OBJECTIVES	ð:					
• To stud	y the working principles of parallel and distributed databases.					
• To unde	erstand the basics of spatial, temporal and mobile databases and their a	appli	catio	ons.		
• To learn	n NoSQL and Big Data Storage Systems.					
• To learn	n emerging databases such as XML and Web Databases.					
To discu	uss information retrieval techniques and Web Search.					
UNIT I	PARALLEL AND DISTRIBUTED DATABASES				9	
Parallel Databa	ses- I/O Parallelism- Inter-Query and Intra-Query Parallelism- Inter-	r-Oj	perat	ion	and	
Intra-operation	Parallelism – Query Optimization – Design of Parallel DB Systems	– Pa	ralle	lisr	n on	
Multi-core prod	cessors - Distributed Database Architecture - Distributed Data Stora	ge –	Dis	trib	uted	
Transactions –	Distributed Transaction Management - Concurrency Control - Da	stril	outed	1 Q	uery	
Processing – H	eterogeneous Distributed Databases – Cloud-based Databases.					
UNIT II	ADVANCED DATABASE SYSTEMS				9	
Active Databas	e Concepts and Triggers - Temporal Database Concepts - Spatial Data	ibas	e Co	nce	pts -	
Multimedia Da	tabase Concepts - Introduction to Deductive Databases – Mobility	y an	d Pe	erso	nnel	
Databases.		_		r		
UNIT III	NOSQL Databases and Big Data Storage Systems				9	
Introduction to	NOSQL Systems - The CAP Theorem - Document-Based NOSQ	QL S	syste	ms	and	
MongoDB - NO	DSQL Key-Value Stores - Column-Based or Wide Column NOSQL Sy	vsten	ns - I	NO	SQL	
Graph Database	es and Neo4j – Hive – Graph Databases.					
UNIT IV	XML AND WEB DATABASES				9	
Structured, Sen	ni structured, and Unstructured Data - XML Hierarchical (Tree) Dat	a M	odel	- X	ML	
Documents, D	FD, and XML Schema - Storing and Extracting XML Documents fi	om	Data	abas	ses -	
XML Languag	es - Extracting XML Documents from Relational Databases - X	ML	/SQI		SQL	
Functions for C	reating XML Data.			— т	0	
	INFORMATION RETRIEVAL AND WEB SEARCH	_	7		<u>9</u>	
Information Re	trieval (IR) Concepts - Retrieval Models - Types of Queries in IR Sy	stem	IS - I	lexi	t Pre	
Trands in Info	rened indexing - Evaluation Measures of Search Relevance - web Sea		ina F	Ma.	lysis	
		15	DF	DI(סחר	
OUTCOMES.	TOTAL	4.			505	
At the end of t	his course, the students will be able to.					
CO1· Identify	advance database concepts and database models					
CO2: Understa	and the basics of spatial temporal and mobile databases and their appl	icati	ons			
CO3: Learn No	SOL and Big Data Storage Systems.	1040	0110.			
CO4: learn em	erging databases such as XML and Web Databases.					
CO5: Examine	the information retrieval techniques and understand Web Search.

Т Р С L **HUMAN COMPUTER INTERACTION** 21CS907 3 3 0 0 **OBJECTIVES:** To learn the foundations of Human Computer Interaction. • To become familiar with the design technologies for individuals and persons with disabilities. • To learn various models pertaining to Human Computer Interaction. To be aware of mobile Human Computer Interaction. To learn the guidelines for user interface UNIT I FOUNDATIONS OF HCI 9 Input-output channels, Human memory, thinking reasoning and problem solving, Emotion, Individual differences, Psychology and the design of interactive systems, Text entry devices, Positioning, pointing and drawing, Display devices, Devices for virtual reality and 3D interaction, Physical controls, sensors and special devices, Paper: printing and scanning. **DESIGN SOFTWARE PROCESS** 9 UNIT II Interactive Design: Basics - process - scenarios - navigation - screen design - Iteration and prototyping. HCI in software process: Software life cycle – usability engineering – Prototyping in practice - design rationale. Design rules: principles, standards, guidelines, rules. Evaluation Techniques – Universal Design. **INTERACTION DESIGN MODELS** 9 **UNIT III** GOMS - CMN-GOMS Analysis, Modeling Structure, State Transition Networks - Three-State Model, Glimpse Model, Physical Models, –Shneideman's eight golden rules, Norman's Sever principles, Norman's model of interaction, Nielsen's ten heuristics, Heuristic evaluation, contextual evaluation, Cognitive walk-through. **UNIT IV MOBILE HCI AND WEB INTERFACE DESIGN** 9 Mobile Ecosystem: Platforms, Application frameworks- Types of Mobile Applications: Widgets, Applications, Games- Mobile Information Architecture, Mobile 2.0, Mobile Design: Elements of Mobile Design, Tools. - Case Studies. Designing Web Interfaces - Drag Drop, Direct Selection, Contextual Tools, Overlays, Inlays and Virtual Pages, Process Flow - Case Studies. COLLABORATION AND COMMUNICATION UNIT V 9 Face-to-face Communication, Conversation, Text-based Communication, Group working, Dialog design notations, Diagrammatic notations, Textual dialog notations, Dialog semantics, Dialog analysis and design: Groupware, Meeting and decision support systems, Shared applications and artifacts, Frameworks for groupware Implementing synchronous groupware, Mixed, Augmented and Virtual Reality. TOTAL: **45 PERIODS** שושש **OUTCOMES:** At the end of this course, the students will be able to: **CO1:** Enumerate the basic concepts of human, computer interactions **CO2:** Inspect software design process in human computer interaction CO3: Examine various models and theories related to human computer interaction CO4: Build meaningful user interface **CO5:** Establish the different levels of communication across the application stakeholders. **TEXT BOOKS:** 4. 9

9

9

9

OBJECTIVES:

- To explain the basics of deep neural networks.
- To discuss advanced deep learning models.
- To apply CNN and RNN architectures of deep neural networks.
- To summarize the evaluation metrics for deep learning models.
- To apply autoencoders and generative models for suitable applications.

UNIT I DEEP NETWORKS

Challenges motivating deep learning - Deep feedforward networks - Learning XOR - Gradient based learning - Hidden Units – Architecture Design – Back Propagation – Regularization – Parameter Norm Penalties – Constrained Optimization – Under-Constrained Problems – Dataset Augmentation – Noise Robustness – Semi-Supervised Learning – Multi-Task Learning – Early Stopping – Parameter Tying and Sharing – Bagging and Other Ensemble methods – Dropout – Adversarial Training.

UNIT II OPTIMIZATION FOR TRAINING DEEP MODELS

Pure optimization – Challenges – Basic Algorithms – Parameter initialization Strategies – Algorithms with Adaptive Learning Rates – Approximate Second-Order methods – Optimization Strategies and Meta Algorithms.

UNIT III CONVOLUTIONAL AND RECURRENT NEURAL NETWORKS

Convolution Operation – motivation – Pooling – Infinitely Strong prior – Variants – Structured Output – Data Types – Efficient Convolutional Algorithms – Random or Unsupervised features – Neuroscientific Basis - Deep Learning – Sequence Modelling - Computational Graphs - RNN -Bidirectional RNN – Encoder-Decoder - Sequence to Sequence RNN - Deep Recurrent Networks -Recursive Neural Networks -- Long Term Dependencies; Leaky Units – Strategies for multiple time scales – LSTM and Gated RNNs – Optimization for Long Term Dependencies.

UNIT IV AUTOENCODERS

Autoencoders: Undercomplete autoencoders - Regularized autoencoders - Power, Layer Size and Depth - Stochastic encoders and decoders - Denoising Autoencoders - Learning with autoencoders - contractive Autoencoders - Applications of autoencoders.

UNIT V | **DEEP GENERATIVE MODELS**

Boltzmann Machine – Restricted Boltzmann Machine – Deep Belief Networks – Deep Boltzmann Machines - Boltzmann Machines for Real-Valued Data – Convolutional Boltzmann Machines -Boltzmann Machine for Structured or Sequential Outputs – Directed Generative Nets – Evaluating Generative Models.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of this course, the students will be able to:

CO1: Explain the basic mathematical and conceptual background of deep learning.

CO2: Describe the deep neural network architecture and the optimization.

CO3: Apply CNN and RNN and its variants for suitable applications.

CO4: Determine performance metrics and evaluate the model.

CO5: Apply autoencoders and generative models for suitable application.

9

9

9

OBJECTIVES:

• To understand the global trends and development methodologies of various types of products and services

• To conceptualize, prototype and develop product management plan for a new product based on the type of the new product and development methodology integrating the hardware, software, controls, electronics and mechanical systems

• To understand requirement engineering and know how to collect, analyze and arrive at requirements for new product development and convert them in to design specification

• To understand system modeling for system, sub-system and their interfaces and arrive at the optimum system specification and characteristics

• To develop documentation, test specifications and coordinate with various teams to validate and sustain up to the EoL (End of Life) support activities for engineering customer

UNIT I FUNDAMENTALS OF PRODUCT DEVELOPMENT

Global Trends Analysis and Product decision – Social Trends – Technical Trends - Economical Trends – Environmental Trends – Political/Policy Trends – Introduction to Product Development Methodologies and Management – Overview of Products and Services – Types of Product Development – Overview of Product Development methodologies – Product Life Cycle – Product Development Planning and Management.

UNIT II REQUIREMENTS AND SYSTEM DESIGN

Requirement Engineering – Types of Requirements – Requirement Engineering – traceability Matrix and Analysis – Requirement Management – System Design and Modeling – Introduction to System Modeling – System Optimization – System Specification – Sub-System Design – Interface Design.

UNIT III DESIGN AND TESTING

Conceptualization – Industrial Design and User Interface Design – Introduction to Concept generation Techniques – Challenges in Integration of Engineering Disciplines – Concept Screening & Evaluation – Detailed Design – Component Design and Verification – Mechanical, Electronics and Software Subsystems – High Level Design/Low Level Design of S/W Program – Types of Prototypes, S/W Testing- Hardware Schematic, Component design, Layout and Hardware Testing – Prototyping – Introduction to Rapid Prototyping and Rapid Manufacturing – System Integration, Testing, Certification and Documentation.

UNIT IV SUSTENANCE ENGINEERING AND END-OF-LIFE (EOL) SUPPORT 9

Introduction to Product verification processes and stages – Introduction to Product Validation processes and stages – Product Testing Standards and Certification – Product Documentation – Sustenance -Maintenance and Repair – Enhancements – Product EoL – Obsolescence Management – Configuration Management – EoL Disposal.

UNIT V BUSINESS DYNAMICS – ENGINEERING SERVICES INDUSTRY

The Industry – Engineering Services Industry – Product Development in Industry versus Academia – The IPD Essentials – Introduction to Vertical Specific Product Development processes -Manufacturing/Purchase and Assembly of Systems – Integration of Mechanical, Embedded and Software Systems – Product Development Trade-offs – Intellectual Property Rights and

Confidentiality – Security and Configuration Management.

OUTCOMES:

At the end of the course, the students should be able to:

CO1: Define, formulate and analyze a problem

CO2: Solve specific problems independently or as part of a team

CO3: Gain knowledge of the Innovation & Product Development process in the Business Context

CO4: Work independently as well as in teams

CO5: Manage a project from start to finish

Evaluating an	nd Choosing the Best Hypothesis, The Theory of Learning, Regression an	d Cl	assif	icati	ion
with Linear I	Models, Artificial Neural Networks. Applications: Human computer int	erac	tion	(HC	CI),
Knowledge r	nanagement technologies, AI for customer relationship management, I	Expe	ert sy	ster	ns,
Data mining,	text mining, and Web mining, Other current topics.				
UNIT IV	FUNDAMENTALS OF MACHINE LEARNING		6+6	5	
Motivation for	or Machine Learning, Applications, Machine Learning, Learning associated	tions	5,		
Classification	n, Regression, The Origin of machine learning, Uses and abuses of machine	ine le	earni	ng,	

Success cases, How do machines learn, Abstraction and knowledge representation, Generalization, Factors to be considered, Assessing the success of learning, Metrics for evaluation of classification method, Steps to apply machine learning to data, Machine learning process, Input data and ML algorithm, Classification of machine learning algorithms, General ML architecture, Group of algorithms, Reinforcement learning, Supervised learning, Unsupervised learning, Semi-Supervised learning, Algorithms, Ensemble learning, Matching data to an appropriate algorithm.

UNIT V

MACHINE LEARNING AND TYPES

6+6

TOTAL: 30+30=60 PERIODS

Supervised Learning, Regression, Linear regression, Multiple linear regression, A multiple regression analysis, The analysis of variance for multiple regression, Examples for multiple regression, Overfitting, Detecting overfit models: Cross validation, Cross validation: The ideal procedure, Parameter estimation, Logistic regression, Decision trees: Background, Decision trees, Decision trees for credit card promotion, An algorithm for building decision trees, Attribute selection measure: Information gain, Entropy, Decision Tree: Weekend example, Occam's Razor, Converting a tree to rules, Unsupervised learning, Semi Supervised learning, Clustering, K – means clustering, Automated discovery, Reinforcement learning, Multi-Armed Bandit algorithms, Influence diagrams, Risk modelling, Sensitivity analysis, Casual learning

OUTCOMES:

At the end of the course, the students should be able to:

CO1: Build a model using AI and ML, and able to predict based on various events

CO2: Demonstrate the working knowledge on tools and frameworks

CO3: Demonstrate knowledge of reasoning and knowledge representation for solving real world problems

CO4: Ability to demonstrate the design of intelligent computational techniques.

CO5: Apply AI and machine learning algorithms to solve real world problems

CO6: Implement problem-solving skills using the acquired knowledge in the areas of, reasoning, natural language understanding, computer vision, automatic programming and machine learning

TEXTBOOK:

1. Introduction to Artificial Intelligence and Machine Learning (IBM ICE Publications).

2. Stuart Russell, Peter Norvig, "Artificial Intelligence: A Modern Approach", Third Edition, Pearson Education *I* Prentice Hall of India, 2010.

3. Elaine Rich and Kevin Knight, "Artificial Intelligence", Third Edition, Tata McGraw-Hill, 2010.

PROFESSIIONAL ELECTIVE - IV

	L	Т	Р	С	
2111921	BLOCKCHAIN TECHNOLOGIES	2	0	2	3
OBJECTIV	ES:				
• To	o understand how block chain systems (mainly Bit coin and Ethereum) w	ork			
• To	o securely interact with them				
• To	b design, build, and deploy smart contracts and distributed applications,				
• To	o integrate ideas from block chain technology into their own projects				
UNIT I	INTRODUCTION		6+0	5	
What is Bloc	kChain, Types of Block Chain, What is Distributed Ledgers, Consensu	ıs A	lgori	ithm	,
Blocks, Trans	saction, Double spending etc Hashing Techniques, Block Hashing, Distrib	outed	l Leo	lgers	S
vs Centralise	d Controls Ledgers. What is BitCoin, how it works, public ledgers, Mine	ers ro	oles,	Pros	s
and Cons.					
UNIT II	CONSENSUS ALGORITHMS		6+0	6	
Consensus A	lgorithms - Proof of Work, Proof of Stake, practical Byzantine Fault Toler	ance	e (pB	BFT)	,
Istanbul Byz	antine Fault Tolerant, Proof of Burn, Proof of Capacity, Proof of E	Elaps	ed 7	Гime	e
Understandin	g between Permissioned vs Permission less Block Chain platforms - D)ata	priva	acy ·	-
Authorization	n - Multi Partner Setup - Private Channels.				
			-		
UNIT III	ETHEREUM AND SOLIDITY		6+6	6	
Solidity Intro	duction and Installation, Strings, Variables, Struct, Enums, Map, Event	s, Co	onve	ersio	ns,
Ether Units,	Payable, View, Pure Functions, Address, Functions, Function Modif	iers,	Fal	l ba	ıck
Function, Ma	th and Crypto Functions, Object Oriented and Error Handling Understan	ndin	g on	EV.	Μ,
Remix, Gas/G	Jas-limit, Accounts, Address, Ethereum Value.				
		-	_	-	
UNIT IV	ETHEREUMS DAAPS DEVELOPMENT		6+0	6	
Installation o	f NodeJS Truffle suite Ganache Metamask Visual Studio Code	Edit	ion -	-	
Solidity Com	piler React Web Application Design and Development of Web3 Apps	usin	ig Da	aap	
Applications	using Solidity on Ethereum Platform			_	
UNIT V	REACT BASED WEB APPLICATION		6+0	6	
The solution w	vill have React based web application as front end, which will communicate with	ı den	love	d Sm	art
Contracta via	Web2ig pagkage Lige Case. Academics Financial Domain Life Science Doma	in dep	1090	u on	iurt
Contracts via	websjs package. Use Case - Academics, Financial Domain, Life Science Doma				
	TOTAL: 30+30=6	50	PEF		DS
OUTCOMES	S:				
At the end of	the course, the students should be able to:				
CO1 : Descr	ibe the basic concepts and technology used for blockchain				
CO2: Illustr	ate the concepts of Bitcoin and their usage				
CO3 : Descr	ibe the concepts of Consensus Algorithm				
CO4 : Imple	ment Ethereum blockchain contract.				
CO5 : Imple	ment web3 apps using Solidity on Ethereum Platform				

CO6: Use smart contract in real world applications

LAB EXCERCISES

Prerequisite:

Knowledge on Block Chain Distributed Ledger Consensus Algorithms – PoW, PoS, Raft , BFT / IBFT etc Permission vs Non Permissioned BC Frameworks React Framework Web3 Library Package Blockchain Framework: - Ethereum **Software Installation:-**

- NodeJS
- Truffle
- Ganache
- VS Code Editor / Remix (online ide or offline IDE)
- Solidity Compiler
- Meta Mask
- React
- Web3

Exercise 1:

Develop a Pet Shop Platform, which buys and sells different set of Pets using ETH currencies. The pet owner can able to declare availability of the Pet(s) with expected cost The buyer who has enough money can able to claim and purchase the pet The balance gets debited from Buyer account and gets credited to Owner Account The pet owner can able to query on who owns the pet, and current eth balance Payload Validation during Sell and Buy actions

Web Interface to the Contract deployed in Eth blockchain via web3 js interface

Exercise 2:

Develop a Learning Management System, where Block Chain is used to store and maintain the learnings the candidates has completed/ongoing.

As part of the process, the following attributes/entities will be captured as part of Learning

- Learning Catalogues
- Student details
- Learning Management
- Student ID
- Learning ID
- Status completed/on going / planned / delayed

. Completion date Manager ID . The learner can able to view the available courses and details The learner can be able to enroll to a course The learner can be able to delist from a course The learner can able to go-through the course The status of the learning gets updated accordingly The admin can able to view the learners details for a given student / given course / between a date range The admin can able to manage the student details The admin can able to manage the Learning Catalogues details Web Interface using React and Web3 **Exercise 3: Funds Transfer Service** Customer – will have customer details like First Name, Last Name, list of mapped bank accounts w balance Bene – will have first name, last name, email, bene account Setting up the Customer of a given bank, with Accounts details, and with available Balance (in the form of eth) Setting up the Bene (who will receive the money or eth from the customer) The owner can transfer money from one account to another bene Money in the form of Eth gets debited from the customer's account and gets credited to Bene account Ability to view the customer & Bene balance Web Interface using React and Web3 **TEXTBOOK:** 1. Imran Bashir, "Mastering Blockchain: Distributed Ledger Technology, Decentralization and Smart Contracts Explained", Second Edition, Packt Publishing, 2118.

2. A. Narayanan, J. Bonneau, E. Felten, A. Miller, S. Goldfeder, "Bitcoin and Cryptocurrency Technologies: A Comprehensive Introduction", Princeton University Press, 2116.

21CS910	SOCIAL NETWORK ANALYSIS	L	T	P	C		
	10	3	0	0	3		
OBJECTIVE							
• To out	line the components of the social network.						
• To exp	ssify descriptive and inferential methods						
 To cia To dis 	cuss about the evolution of the social network.						
• To illu	istrate the applications in real time systems.						
UNIT I	INTRODUCTION				9		
Basics of Soci	al Network Analysis: Introduction- The Social network and How to F	Repr	esent	t it-T	ypes		
of Networks-	Network parts and Level of Analysis-Networks as Social Structur	e ar	d In	stitu	tion-		
Theoretical A	ssumptions-Causality in Social Network Studies- A Brief History of	of So	ocial	Netv	work		
Analysis-Mat	hematical Foundations: Graphs-Paths and components-Adjacency m	natri	ces-V	Nays	s and		
modes-Matrix	products-Sources of network data-Types of nodes and types of ties	s-Da	ta Co	ollec	tion:		
Network ques	stions-Question formats-Interviewee burden-Data collection and re-	eliab	ility-	Arc	hival		
data collection	n-Data from electronic sources.						
UNIT II	MODELING AND VISUALIZATION				9		
Data Manage	ement: Data import-Cleaning network data-Data transformation	n-N	orm	aliza	tion-		
Cognitive soc	ial structure data-Matching attributes and networks-Converting attri	bute	s to	matr	ices-		
Data export,-	Multivariate Techniques Used in Network Analysis: Multidim	ensi	onal	sca	ling-		
Corresponden	ce analysis-Hierarchical clustering,- Visualization: Layout-E	Embe	eddir	ng :	node		
attributes-Noc	le filtering-Ego networks-Embedding tie characteristics-Visualizing	net	work	c cha	nge-		
Exporting vis	ualizations-Closing comments.						
UNIT III	DESCRIPTIVE AND INFERENTIAL METHODS				9		
Descriptive M	lethods in Social Network Analysis: Graph and Matrix-Social Netwo	rk R	lepre	senta	ation		
– Density – C	entrality, Centralization and Prestige- Cliques – Multidimensional S	cali	ng(N	(IDS)) and		
Dendogram –	Structural Equivalence-Two mode Networks and Bipartite Matrix-In	fere	ntial	Met	hods		
in Social Netw	vork Analysis: Permutation and QAP (Quadratic Assignment Proceed	dure) Co	rrela	tion-		
P* or Expone	ntial Random Graph Model(ERGM)						
UNIT IV	EVOLUTION				9		
Evolution in S	Social Networks – Framework - Tracing Smoothly Evolving Comr	nuni	ties	- Mo	odels		
and Algorithm	ns for Social Influence Analysis - Influence Related Statistics - Soc	ial S	Simil	arity	and		
Influence - In	nfluence Maximization in Viral Marketing - Algorithms and Sy	sten	ns fo	or Ex	xpert		
Location in Se	ocial Networks - Expert Location without Graph Constraints - with S	Scor	e Pro	opaga	ation		
- Expert Tear	n Formation - Link Prediction in Social Networks - Feature based	Linł	c Pre	dicti	on –		
Bayesian Prob	babilistic Models - Probabilistic Relational Models.						
UNIT V	APPLICATIONS				9		
A Learning B	ased Approach for Real Time Emotion Classification of Tweets, A	A No	ew L	ingu	istic		
Approach to A	Assess the Opinion of Users in Social Network Environments, Exp	lain	ing S	Scier	ntific		
and Technical	Emergence Forecasting, Social Network Analysis for Biometric Te	mpl	ate P	rote	ction		
TOTAL: 45 PERIODS							
OUTCOMES:							
At the end of	this course, the students will be able to:						

CO1: Define the internal components and terminology of the social network.

CO2: Explain fundamental exploratory multivariate techniques and visualizing network data.

CO3: Discuss most common descriptive and inferential statistical tools available.

CO4: Discuss about the evolution of the social network.

CO5: Illustrate the real time applications of social network analysis.

21AM912	SOFT COMPUTING	L	Т	Р	С		
		3	0	0	3		
 OBJECTIVES: To learn the basic concepts of Soft Computing. To understand artificial neural networks. To explain fuzzy systems. To explain Genetic Algorithms. To discuss the various Hybrid algorithms and various Swarm Intelligence algorithms. 							
UNIT I	INTRODUCTION				9		
Neural Networks - Application Scope of Neural Networks - Fuzzy Logic - Genetic Algorithm - Hybrid Systems - Soft Computing - Artificial Neural Network - Evolution of Neural Networks - Basic Models of ANN – Weights – Bias – Threshold – Learning Rate – Momentum Factor – Vigilance Parameter- McCulloch–Pitts Neuron - Linear Separability - Hebb Network.							
UNIT II	ARTIFICIAL NEURAL NETWORKS				9		
Perceptron Networks - Adaptive Linear Neuron - Multiple Adaptive Linear Neurons - Back- Propagation Network - Radial Basis Function Network - Pattern Association - Autoassociative and Heteroassociative Memory Networks - Bidirectional Associative Memory (BAM) - Hopfield Networks - Fixed Weight Competitive Nets - Kohonen Self-Organizing Feature Maps.							
UNIT III	FUZZY SYSTEMS				9		
Fuzzy Logic Functions - Cuts for Fuz Fuzzy Rease	e - Classical Sets (Crisp Sets) - Fuzzy Sets – Fuzzy Relation - Featu Fuzzification - Methods of Membership Value Assignments - Def zzy Sets (Alpha-Cuts) - Lambda-Cuts for Fuzzy Relations - Defu oning – Fuzzy Inference Systems.	ires o uzzifi izzifi	f the N ication	Membe n - Lar Meth	ership nbda- ods –		
UNIT IV	GENETIC ALGORITHMS	7			9		
Biological H Search Space Constraints Genetic Pro	Background - Traditional Optimization and Search Techniques- C ce Simple GA - General Genetic Algorithm - Operators - - Problem Solving - The Schema Theorem- Classification - Holla gramming - Advantages and Limitations- Applications.	Genet Stop Ind C	ic Alg ping lassifi	gorithr Condit er Sys	n and tion - tems-		
UNIT V	HYBRID SOFT COMPUTING AND SWARM INTELLIGE ALGORITHMS	NCE			9		
Neuro-Fuzzy Hybrid Systems - Genetic Neuro-Hybrid Systems - Genetic Fuzzy Hybrid and Fuzzy Genetic Hybrid Systems - Simplified Fuzzy ARTMAP – Swarm Intelligence Algorithms - Ant Colony Optimization – Artificial Bee Colony – Particle Swarm Optimization – Firefly Algorithm.							
	Т	ОТА	L: 45	PER	ODS		

OUTCOMES:

At the end of this course, the students will be able to:

CO1: Understand the basic concepts of Soft Computing

- **CO2:** Artificial neural networks and its applications.
- **CO3:** Fuzzy logic and its applications.
- CO4: Solving problems using Genetic algorithms.
- **CO5:** Applications of Soft computing to solve problems in varieties of application domains.

TOTAL: 45 PERIODS

OUTCOMES:

At the end of the course, the students should be able to:

CO1: Gather, derive, define and validate real requirements for the specified network.

CO2: Understand different types of requirements from the user, application, device and network component

CO3: Develop traceability between requirements, architecture decisions, and design decisions

CO4: Implement how and where addressing and routing, security, network

management, and performance are required in the network.

CO5: Use SNMPv1, v2 and v3 protocols.

2100/21			0	0	3		
OBJECTIV	/ES:						
• To a	nalyse the behaviour of basic quantum algorithms						
• To c	liscuss simple quantum algorithms and information channels in the quantu	m ci	rcuit				
model		, .					
• 10 a	pply the quantum algorithms in superdense coding and quantum teleporta	tion					
• 10 a	naryse the argorithms with super-polynomial speed-up						
• 101	nustrate a simple quantum error-correcting code						
UNIT I	FOUNDATION				9		
Overview o – reversible Hilbert Spa products – S	Overview of traditional computing – Church-Turing thesis – circuit model of computation – reversible computation – quantum physics – quantum physics and computation – Dirac notation and Hilbert Spaces – dual vectors – operators – the spectral theorem – functions of operators – tensor products – Schmidt decomposition theorem						
UNIT II	QUBITS AND QUANTUM MODEL OF COMPUTATION				9		
State of a quantum system – time evolution of a closed system – composite systems – measurement – mixed states and general quantum operations – quantum circuit model – quantum gates – universal sets of quantum gates – unitary transformations – quantum circuits							
UNIT III	QUANTUMALGORITHMS-I				9		

Superdense coding – quantum teleportation – applications of teleportation – probabilistic versus quantum algorithms – phase kick-back – the Deutsch algorithm – the Deutsch- Jozsa algorithm – Simon's algorithm – Quantum phase estimation and quantum Fourier Transform – eigenvalue estimation

UNIT IV QUANTUM ALGORITHMS – II

Order-find	ing problem	ı – ei	genvalue est	imation ap	proach to or	ler find	ing – Shor'	s algorithm for order
finding - finding discrete logarithms - hidden subgroups - Grover's quantum search algorithm -								
amplitude	am	plifi	cation	—	quantum		amplitude	estimation-
quantum	counting	_	searching	without	knowing	the	success	probability.

UNIT V QUANTUM COMPUTATIONAL COMPLEXITY AND ERROR CORRECTION

Computational complexity – black-box model – lower bounds for searching – general black-box lower bounds – polynomial method – block sensitivity – adversary methods – classical error correction – classical three-bit code – fault tolerance – quantum error correction – three- and nine-qubit quantum codes – fault-tolerant quantum computation.

TOTAL: 45 PERIODS

9

9

OUTCOMES:

At the end of this course, the students will be able to:

CO1: Analyse the behaviour of basic quantum algorithms

CO2: Discuss simple quantum algorithms and information channels in the quantum circuit model

CO3: Apply the quantum algorithms in superdense coding and quantum

Teleportation

CO4: Analyse the algorithms with super polynomial speed-up

CO5: Illustrate a simple quantum error-correcting code

LAB EXCERCISES:

Prerequisite:

Develop a Sample Spring Boot Project with following aspects

REST API End Points

- Ex Funds Transfer Service
- Query Fund Transfer Status ٠

Junit Test Cases

Selenium Test Cases

DockerFile

Scripts for Docker Image and Container Cleanup / Creation

Maven Pom file with Docker integrations

Software Installation: -

- Java 8 •
- Maven Latest
- VS Code / Eclipse STS
- Jenkins •
- SonarQube
- Docker and Kubernetes
- Git Client •
- Nagios Network Mentoring Tool •

Reference https://docs.semaphoreci.com/examples/java-spring-continuous-integration/

Exercise 1:

- Install Jenkins
- Configure Jenkins for Maven, Java, GitHub, SonarQube and SonarScanner
- Setup Continuous Integration on Jenkins for the above said project and show case the build • அக்கம் stability in the form of
 - Build Stability
 - Test Case Success / Regression
 - Code Quality Check using SonarQube

Points to be observed: -

- **Build Stability** •
- **Finger Prints** •
- Test Case Results
- Workspace
- Application Logs
- Jenkins Pre / Post Actions
- Email Notifications

• Sonar Qube Report Analysis

Exercise 2:

- Install Groovy
- Create a Pipelines in Jenkins which will perform following steps
 - Configure Java/Maven/Private Repo
 - Git Clone of the above said project
 - Maven Build
 - Maven Test
 - Sonar Scanner (if quality if OK then proceed, else exit with error message)
 - Repo Setup and Install Libraries in the Repo
 - Docker Clean Containers
 - Docker Clean Images
 - Docker Build
 - Docker Run Container

Points to be observed: -

- Build Stability
- Finger Prints
- Test Case Results
- Workspace
- Application Logs
- Jenkins Pre / Post Actions
- Email Notifications
- Sonar Qube Report Analysis
- Time Taken for each Steps
- Process Refinement

Т Ρ С L 21IT922 3 0 0 3 **INFORMATION RETRIEVAL TECHNIQUES OBJECTIVES:** • To understand the basics of Information Retrieval. • To understand machine learning techniques for text classification and clustering. • To understand various search engine system operations. • To learn different techniques of recommender system UNIT I **INTRODUCTION** 9 Information Retrieval - Early Developments - The IR Problem - The User's Task - Information versus Data Retrieval - The IR System - The Software Architecture of the IR System - The Retrieval and Ranking Processes - The Web – The e-Publishing Era – How the web changed Search – Practical Issues on the Web – How People Search – Search Interfaces Today – Visualization in Search Interfaces. UNIT II MODELING AND RETRIEVAL EVALUATION 9 Basic IR Models - Boolean Model - TF-IDF (Term Frequency/Inverse Document Frequency) Weighting - Vector Model - Probabilistic Model - Latent Semantic Indexing Model - Neural Network Model – Retrieval Evaluation – Retrieval Metrics – Precision and Recall – Reference Collection – User-based Evaluation – Relevance Feedback and Query Expansion – Explicit Relevance Feedback. **TEXT CLASSIFICATION AND CLUSTERING** g UNIT III A Characterization of Text Classification – Unsupervised Algorithms: Clustering – Naïve Text Classification – Supervised Algorithms – Decision Tree – k-NN Classifier – SVM Classifier – Feature Selection or Dimensionality Reduction – Evaluation metrics – Accuracy and Error – Organizing the classes – Indexing and Searching – Inverted Indexes – Sequential Searching – Multi-dimensional Indexing. 9 WEB RETRIEVAL AND WEB CRAWLING UNIT IV The Web - Search Engine Architectures - Cluster based Architecture - Distributed Architectures -Search Engine Ranking – Link based Ranking – Simple Ranking Functions – Learning to Rank – Evaluations -- Search Engine Ranking - Search Engine User Interaction - Browsing - Applications of a Web Crawler - Taxonomy - Architecture and Implementation - Scheduling Algorithms -Evaluation. 9 UNIT V **RECOMMENDER SYSTEM** Recommender Systems Functions - Data and Knowledge Sources - Recommendation Techniques -Basics of Content-based Recommender Systems - High Level Architecture - Advantages and Drawbacks of Content-based Filtering - Collaborative Filtering - Matrix factorization models -Neighborhood models. TOTAL: 45 PERIODS

OUTCOMES:

At the end of the course, the students should be able to:

CO1: Use an open source search engine framework and explore its capabilities

CO2: Apply appropriate method of classification or clustering.

CO3: Design and implement innovative features in a search engine.

CO4: Design and implement a recommender system.

2117927	INDIAN CONSTITUTION	L	T	P	C
2111/27		3	0	0	3
OBJECTIV	ES:				
• To hav	e some knowledge about Indian Constitution.				
• To unc	lerstand the concept of fundamental rights				
• To lear	rn about Lok Sabha and Rajya Sabha				
• To hav	e some knowledge about Legislative Assembly and Legislative Council				
• To lear	rn about Local Self Government				
UNIT I	INTRODUCTION		9		
Meaning and	Importance of Constitution - Preamble and Salient Features of the Const	ituti	on.		
UNIT II	FUNDAMENTAL RIGHTS		9		
Fundamental	Rights, Right to Equality, Right to Freedom, Right against exploitation	on,	Rig	ht to)
freedom of re	eligion, Cultural and Educational Rights, Right to Constitutional Remedie	s an	d Du	ities	,
Directive Pri	nciples of State Policy.				
UNIT III	LOK SABHA AND RAJYA SABHA		9		
Union Gover	nment – Lok Sabha and Rajya Sabha Composition, Powers and functions:	The	e Pre	side	nt,
The Prime M	inister and Supreme Court: Role Position and Powers/ functions.				
UNIT IV	LEGISLATIVE ASSEMBLY AND LEGISLATIVE COUNCIL		9		
State Govern	ment - Legislative Assembly and Legislative Council: Composition, Pow	ers	and		
functions: Th	e Governor, Chief Minister and High Court: Role, Position and Powers/	func	tions	5	
UNIT V	LOCAL SELF GOVERNMENT		9		
Local self-Go	overnment, Panchayat Raj System in India; Election Commission; Public	Serv	vice		
Commission	s, Role, powers and function				
		5	PER	RIO	DS
OUTCOMES					
At the end of	the course, the students should be able to:				
CO1: Interpr	et the knowledge on Indian Constitution.				
CO2: Demor	strate the knowledge gained through fundamental rights concept.				
CO3: Relate	the concept of Lok Sabha and Rajya Sabha.				
CO4: Illustra	te the concept of Legislative Assembly and Legislative Council.				
CO5: Analyz	e the concept of Local Self Government.

inneritance iv	apping, si ris moornate, e Query, som Query, i ugmation, errob opera	.1011.			
UNIT IV	MICROSERVICE IMPLEMENTATION		6+0	6	
Eureka Servi	ce Registry Configuration and Setup.				
Spring Cloud	Ribbon - Client-Side LB. Spring Cloud Config - Centralized Versioned	Con	figu	ratic	on.
Spring Feign	Client - Declarative REST Client. Spring Boot - Spring Configuration (E	lurel	ka, P	ort.	
JPA cfgs). Sr	oring RestController, Feign Rest Client, Spring Hystrix Fault Tolerant, Fa	ıll B	ack	,	

Implementation, Hystrix Configuration, Hystrix Dashboard. Spring Cloud Bus - Dynamic Configuration Changes.

UNIT V

MICROSERVICE SECURITY AND INTEGRATIONS

6+6

Integration with Spring MS Components, RabMQ Exchanges/Queue. API Gateway Pattern, Spring Cloud Gateway, Caching Options, Redirection, Security, Integrating with Service Registry. Sleuth, Zipkin and Spring Admin.

Docker Containers - Image, Containers, Linking, Volume, Networks, Logs, K8, Apache Kafka -Producers, Consumers, Queries, Streaming, Case Study - Project Execution using Microservice

TOTAL: 30+3==60 PERIODS

OUTCOMES: At the end of the course, the students should be able to:

CO1: Understand the need and Architecture of Microservices.

CO2: Design applications and understand Microservice pattern.

CO3: Understand Spring Boot and learn its application.

CO4: Understand Eureka and Configure Spring Cloud.

CO5: Design Applications using Docker Microservices

LIST OF EXERCISES

Microservice Implementation for the following use cases

Use Cases:

1. Star Small and Medium Banking and Finance

2. Inventory Management for a EMart Grocery Shop

3. Society Financial Management

4. Cop Friendly App - ESeva

5. Property Management - eMall

Details of use cases will be provided to the students through Lab Manual.

TEXTBOOK:

1. Microservices: Flexible Software Architecture by Eberhard Wolff, 2016.

- 2. Microservice Patterns and Best Practices: Explore patterns like CQRS and event sourcing to create scalable, maintainable, and testable Microservices by <u>Vinicius Feitosa Pacheco</u>, 2018
- 3. Microservices with Spring Boot and Spring Cloud: Build resilient and scalable microservices using Spring Cloud, Istio, and Kubernetes, 2nd Edition by <u>Magnus Larsson</u>, 2021.

Building Microservices: Designing Fine-Grained Systems by <u>Sam Newman</u>, Second Edition,
 2021.

2. Hands-On Microservices with Spring Boot and Spring Cloud: Build and deploy Java microservices using Spring Cloud, Istio, and Kubernetes, by <u>Magnus Larsson</u>, 2019

3. Essentials of Microservices Architecture: Paradigms, Applications, and Techniques, 1st Edition, Kindle Edition by <u>Chellammal Surianarayanan</u>, <u>Gopinath Ganapathy</u>, <u>Raj Pethuru</u>.

OPEN ELECTIVES (OFFERED BY IT DEPARTMENT TO OTHER DEPARTMENTS)

L Т Ρ С **21IT002 ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING** 3 0 0 3 **OBJECTIVES:** Understand the concept of Artificial Intelligence Familiarize with Knowledge based AI systems and approaches • Apply the aspect of Probabilistic approach to AI Identify the Neural Networks and NLP in designing AI models • Recognize the concepts of Machine Learning and its deterministic tools • UNIT I **PROBLEM SOLVING AND SEARCH STARTEGIES** 9 . Introduction: What Is AI, the Foundations of Artificial Intelligence, The History of Artificial Intelligence, The State of the Art. Intelligent Agents: Agents and Environments, Good Behaviour: The Concept of Rationality, The Nature of Environments, And The Structure of Agents. Solving Problems by Searching: Problem-Solving Agents, Uninformed Search Strategies, Informed (Heuristic) Search Strategies, Heuristic Functions. Beyond Classical Search: Local Search Algorithms and Optimization Problems, Searching with Nondeterministic Actions and Partial Observations, Online Search Agents and Unknown Environments. Constraint Satisfaction Problems: Definition, Constraint Propagation, Backtracking Search, Local Search, The Structure of Problems. UNIT II **KNOWLEDGE REPRESENTATION AND REASONING** 9 Logical Agents: Knowledge-Based Agents, Propositional Logic, Propositional Theorem Proving, Effective Propositional Model Checking, Agents Based on Propositional Logic. FirstOrder Logic: Syntax and Semantics, Knowledge Engineering in FOL, Inference in First-Order Logic, Unification and Lifting, Forward Chaining, Backward Chaining, Resolution. Planning: Definition, Algorithms, Planning Graphs, Hierarchical Planning, Multi-agent Planning. Knowledge Representation: Ontological Engineering, Categories and Objects, Events, Mental Events and Mental Objects, Reasoning Systems for Categories, Reasoning with Default Information, The Internet Shopping World. LEARNING 9 UNIT III . Learning from Examples: Forms of Learning, Supervised Learning, Learning Decision Trees, Evaluating and Choosing the Best Hypothesis, The Theory of Learning, Regression and Classification with Linear Models, Artificial Neural Networks. Applications: Human computer interaction (HCI), Knowledge management technologies, AI for customer relationship management, Expert systems, Data mining, text mining, and Web mining, Other current topics. 9 **FUNDAMENTALS OF MACHINE LEARNING** UNIT IV Motivation for Machine Learning, Applications, Machine Learning, Learning associations, Classification, Regression, The Origin of machine learning, Uses and abuses of machine learning, Success cases, How do machines learn, Abstraction and knowledge representation, Generalization, Factors to be considered, Assessing the success of learning, Metrics for evaluation of classification

method, Steps to apply machine learning to data, Machine learning process, Input data and ML

algorithm, Classification of machine learning algorithms, General ML architecture, Group of algorithms, Reinforcement learning, Supervised learning, Unsupervised learning, Semi-Supervised learning, Algorithms, Ensemble learning, Matching data to an appropriate algorithm.

UNIT V

MACHINE LEARNING AND TYPES

9

Supervised Learning, Regression, Linear regression, Multiple linear regression, A multiple regression analysis, The analysis of variance for multiple regression, Examples for multiple regression, Overfitting, Detecting overfit models: Cross validation, Cross validation: The ideal procedure, Parameter estimation, Logistic regression, Decision trees: Background, Decision trees, Decision trees for credit card promotion, An algorithm for building decision trees, Attribute selection measure: Information gain, Entropy, Decision Tree: Weekend example, Occam's Razor, Converting a tree to rules, Unsupervised learning, Semi Supervised learning, Clustering, K – means clustering, Automated discovery, Reinforcement learning, Multi-Armed Bandit algorithms, Influence diagrams, Risk modelling, Sensitivity analysis, Casual learning

OUTCOMES:

At the end of the course, the students should be able to:

. CO1: Build a model using AI and ML, and able to predict based on various events

CO2: Demonstrate the working knowledge on tools and frameworks

CO3: Demonstrate knowledge of reasoning and knowledge representation for solving real world problems

CO4: Ability to demonstrate the design of intelligent computational techniques.

CO5: Apply AI and machine learning algorithms to solve real world problems

CO6: Implement problem-se	olving skills using the acquired knowledge in	the areas	of,
reasoning, natural language	understanding, computer vision, automatic	programming	and
machine learning.

Keywords, Try-Catch-Finally, Try with Resources, Exception vs Runtime exception vs Throwable vs Error						
UNIT IV	MULTITHREADING AND IO		9			
Concurrency and Parallelism Programing, Runnable, Threads approach, Threads Life Cycle, Fork and Join, wait, sleep, notify and yield. Executor Framework with Callable and Runnable options, Concurrent locks, Synchronized Collections (Concurrent Map, synchronized List, synchronized Map, synchronized Set, synchronizedSortedSet) Atomic data types (AtomicInteger, AtomicLong, AtomicIntegerArray), CountDownLatch ,Blocking Queue Java IO – Files, Pipes, Streams, Byte and Char arrays, Readers and Writers, Input and Output Stream, Byte Array Input and Output, Buffer Input and output						
UNIT V	FUNCTIONAL PROGRAMMING AND LAMBDA		9			

Functional Programming (vs Object Oriented), imperative and declarative programming, Pure Functions, Functional Composition, Side Effects, Immutable, Java Functions and Predicates, Arrow Functions, @Functional interface, Higher Order Functions

Streams API – Map, Filter, Reduce, Collect, Count, min and max Functions, Behavior as Parameterization, Seq and Parallel Streams, Converting a Array or File output as Streams

JDBC – DataSource, Configurations, Connection, Connection Pools, Driver Types, ResultSet, Prepared Statement, Named Parameter, Embedded SQL (Insert, Update, Delete, Join, union etc), ResultSet Navigation, Connection Close and Clean up

TOTAL: 45 PERIODS

OUTCOMES:

At the end of the course, the students should be able to:

CO1: Design and develop various applications in Java using OOD and Principles

CO2: Implement a given problem statement by selecting the right choice of options in Core Java.

CO3: Accomplish efficient programming in Core Java

CO4: Design and develop real time applications to process high volume of data with consistency and atomicity

CO5: Develop applications to Connect to Database using available thin drivers, and performs DDL operations.

211T933	SERVER-SIDE ENGINEERING		Т	P	C		
			0	2	3		
 OBJECTIVES: The Course will enable learners to: To Learn why server-side JavaScript is useful To Create basic web applications with Node.js To Build an HTTP server using the core modules in Node.js To Use stream I/O to efficiently serve the web pages To Test the reliability of the application with unit tests To Interface to a Postgre SQL and Mongo DB database and a web service 							
UNIT I	ECMA SCRIPT 6			(6+6		
Let/Var/Const, Arrays, Functions, Object Oriented- Java Script Object Operations, Assignments-Events, Call Back Functions- AJAX, Time Out, String, Date - If-Else, Comparisons - Maps & Sets, Errors - Hoisting, Strict Mode - Arrow Function, HOC - JSON, Debugging, Scope - Name Spaces& Modules - Spread Operator - DeStructuring -Closures - Promise/Async Await - DOM Manipulation/Traversal.							
UNIT II	NODEJS - I			0	6+6		
NodeJS Intro	Aduction - NodeJS Architecture, Hello World application, Whe	en to	use	nod	eJs,		
	f NodeJS - NPM - Node Package Manager, CLI Commands,	-			816		
	NODEJS - II	<u></u>	iaa		0+0		
Giobai VS	notar installation, Oninstall, Search - packa	ye. DE	JSU DI /+:	л nv оi	ille ir all		
basic IS con	nmands)- Globals - OS - Timer - Errors - Streams - File Strea	me -	ı∟(u Dath	יש גע ער גע	trina		
Decoder - Ol	lery String - 7LIB - Assertion	1113 -	i au	1-0	ung		
	APPLICATION PROGRAMMING INTERFACE		-		6+6		
	to REST APL - HTTP Verbs - Http Status Code - REST LIBI Patt	orne	- Evi	nros	s 19		
- Exposing REST APIs, Basic Routing, Static files. Request and Response, JSON Content Type, Handling HTTP Headers, Reading values from Query String/Http-Headers, Middleware							
					+6		
Introduction to MongoDB, NoSQL vs SQL (CAP Theorem), Driver Installation, Create Database, Create Collection, Insert / Delete / Update / Fetch Operation, Join Query Operation, Transactions, Limit, Drop Collection, Aggregations, Indexing/Search - Unit Testing the Rest API with Mocha & Sinon							
List of Exercise/Experiments							
1) Develop a Library Management purely in JS, and deploy it to NodeJS implementation.							
2) The developed solution should be user i/p driven							
3) The data generated or presented should be fetched from a file system							
4) Develop a REST API for Form based Login Service (username and password, POST)							
5) Develop a ready only API for fetching List of Countries							
6) Develop a ready only API for querying a Countries list based in ID/Name							
7) Develop a Rest API for Update a Customer Object							

8) Develop a REST API for removing a Country object.					
9) Create a Database and Collection – for Flower Ecommerce Web Site					
10) Design and Develop Entities for the same (adhere to specific nosql design aspect)					
11) Trigger a Join Query between Orders, and Order Items Details, and try to generate a top sales					
based on volume and cost report					
12) Create an Index for Orders collection, and show case that the query performance gets improved					
before & after index creation.					
13) Show case the Mongodb Transaction aspect in a multi update scenario.					
To develop the following Web application					
1) Student Management System					
2) Retail Bank System					
3) eCommerce System					
TOTAL: 30+30=60 PERIODS					
OUTCOMES:					
At the end of the course, the students will be able to:					
CO1:Learn a javascript code that executes in strict mode only					
CO2: Able to build an HTTP server using the core modules in Node.js					
CO3: Learn how Node.js is architected to allow high scalability with asynchronous code					
CO4:Hands on knowledge on Rest API, propTypes					
CO5:Able to develop a Full Stack web application using latest Node.js and MongoDB					
TEXTBOOKS:					
1) Vasan Subramanian, Pro MERN Stack, Full Stack Web App Development with Mongo,					
Express, React, and Node 2nd ed. Edition					
2) https://www.manning.com/books/getting-mean-with-mongo-express-angular-and-node-					
second-edition					
3) https://nodejs.dev/en/learn/ (Parental Website)					
REFERENCES:					
1) https://www.tutorialspoint.com/nodejs/index.htmMongoDB Tutorial					
2) https://www.mongodb.com/					
3) https://github.com/mongodb/mongo					
LIST OF EQUIPMENTS:					
1) A local installation of Node.js					
2) NeoColab					
3) NodeJS (v9.11.2)					
4) Github as code repository					
5) Visual studio code as IDE					
6) A recent version of Google Chrome or Mozilla Firefox					
o) A fecent version of Google Chrome of Mozina Pitelox					
7) Admin/root or sudoer privileges to install additional features during the class

Use Case 1:	-	•	,				
Retail banking Application Modules							

- Login and Logout
- Bean Creation
- Funds Transfer
- Funds Transfer Status

Use Case 2:

Library Management Modules

- Login and Logout
- Browsing the Book Catalogue
- Student Can able to lend books
- Student can able to return the books
- Admin Can able to add Books, remove damaged books, add users
- Payment of Late / Subscription Fees

Use Case 3: Student Management

- Login and Logout
- Admin to Add Students, Departments
- Admin to assign Students to a department and Semester
- Admin to upload Student Marks
- Student can able to view the details, marks sheet
- Student can able to mark attendance for today's date

TOTAL: 30+ 30=60 PERIODS

OUTCOMES:

Upon completion of the course, the students will be able to:

CO1: Personalize web pages using text formatting, graphics, audio, and video.

CO2:Hands on knowledge on Typescript

CO3: Able to develop a web application using latest Angular Framework

CO4:ApplyvariousAngularfeaturesincludingdirectives,components,and services.

CO5: Able to develop data driven back end API using NodeJS as the core platforms.

windows - K	SQL - Introduction to KSQLDB - Create a Stream	n - Stre	eaming (Jueries	- Creating		
a Materializ	e view - inserting a data to a Stream - Querying	a Data	a - Strea	m Proc	essing.		
List of Exercise/Experiments							
1. Implementation of an Application such as Student Information System using Informatice, virtual European Abstract Classes							
2 Install Kafka on the system							
3 Using CLI try to							
a. Create a Topic with n+1 partition.							
b.	Try to send a simple string message to a topic						
c. Try to send a JSON object to a Topic							
d. From the consumer side, showcase the ability to read the message from to					pic		
e.	e. Create a cluster kafka setup, and show case the option of topic failure in case of a not						
	going down.		-				

- 4. Develop a REST based Spring application, that store the request message payload to a Kafka Topic
- 5. Develop a Listener under Spring Boot, that will
 - a. Connect to a Topic and read the message as & when its received
 - b. Connect to a Topic + a specific Partition ID
 - c. Connect to a Topic + specific Offset
 - d. In the same Spring Boot app, try to handle Transactional support when reading message from the Kafka Topics, and have a proper Exception Handling mechanism for reporting & retry options.
- 6. Develop a application in Spring Boot, that will create a mock stream of financial data, such as
 - a. Credit Card transaction initiation message to a topic (streaming)
 - b. There should a be listener to this above topic, which will query the transaction data, and process the same. The processed transaction data pushed into another queue
 - c. We should able to query the above topics, and print the total number of transactions being
- 7. Show case the ability to Query the data(streaming data) from different topics, (using sql join like syntax)

USECASES:

OUTCOMES:

- 1. Application Log Analytics
- 2. Banking Events Management (events pertaining to different banking state operations)
- 3. Fraud detection
- 4. Credit Card Issuance

TOTAL: 30+30=60 PERIODS

Upon completion of the course, the students will be able to:

CO1: Setup a basic Kafka development environment

CO2: Immersive hands-on learning on Apache Kafka.

CO3: Acquire knowledge of Kafka Ecosystem and its components

CO4:Implement Java programs to handle asynchronous data integration among multiple systems using Apache Kafka

CO5: Develop a Standalone Applications using Kafka.

21IT936	USABILITY DESIGN OF SOFTWARE APPLICATIONS	р С 2 3					
OBJECTIV		- 0					
 To learn the fundamentals of User Cantered Design, their relevance and contribution to businesses. 							
•	To study the principles of heuristic evaluation for interactive design.						
• '	To understand the appreciation of user research solution conceptualizat	tion and					
	validation as interwoven activities in the design and development lifecycle	and					
	To familiarize the facets of User Experience (UX) Design particularly as appli	ad to the					
	• 10 familiarize the facets of User Experience (UX) Design, particularly as applied to the digital artifacts.						
• 7	To implement complex mobile/web applications.						
UNIT I	INTRODUCTION TO USER CENTRED DESIGN	6+6					
Basics of	User Centered Design-Elements-Models and approaches-User Centered	Design					
Principles-L	Jsability-UCD Process-Analysis tools: personas, scenarios, and essential us	se cases					
with examp	les-User-Centered Design and Agile aspects of User Centered Design.						
UNIT II	INTERACTIVE DESIGN EVALUATION	6+6					
Introduction	n to Interactive Design process – Interactive design in practice – Introducing ev	aluation					
– Evaluatio	n: Inspection, Analysis and Models – Inspection: Heuristic Evaluation: 10 I	Heuristic					
Principles,	Examples.						
	DEVELOPMENT OF APPLICATION	6+6					
Case Study	: Development of any application like mobile or web based on User Centred	Design -					
Design lifed	cyle: Establishing Requirements, Design, Prototyping and Construction.	·					
UNIT IV	UX RESEARCH	6+6					
Understand	ling users, their goals, context of use, environment of use. Research Tec	hniques:					
Contextual	Enquiry, User Interviews, Competitive Analysis for UX.						
UNIT V	ITERATIVE PRODUCT DEVELOPMENT	6+6					
The Proble	em with Complexity - Iterative Product Development - Scenarios and	Persona					
Technique,	Design Thinking Technique: Discovery and brainstorming - Concept Develo	opment -					
Prototyping	Techniques : Paper, Electronic, Prototyping Tools - Review and feedback.						
b Exercises							
1. Product Appreciation Assignment - Evaluating the product from User Centred Design							
aspects such as functionality, ease of use, ergonomics, and aesthetics.							
2. Heur	2. Heuristic Evaluation: Group Assignment initiation (Website and App) Evaluation for key						
tasks	of the app or website for heuristic principles, severity, recommendations.						
3. Stud	3. Students will identify a project in the given domain (Healthcare, E-Commerce, Online						
Lear	Learning Platforms, Gaming, Point-of-Sale, Smart Things) and its related website or mobile						
app to redesign. They will take this redesign project through the design lifecycle:							
Discovery							
Define							
Design							
Implement (Design Prototype)							
Us Us	Usability Testing						
The below design methods and techniques will be imparted w.r.t. the group project							
A Presentation of Persona for the group project							
5 Task flow detailing for the project							
J. Task	The usualling for the project.						

- 6. Project Prototyping Iteration 1.
- 7. Project Prototyping Iteration 2.
- 8. Final presentation of solution (Mobile or Web Application).

TOTAL 30+30=60 PERIODS

அக்கம்

OUTCOMES:

At the end of this course, the students will be able to:

CO1: Understand the fundamentals and importance of User-Centred design.

CO2: Perform design evaluation by applying the heuristic principles.

CO3: Develop an application focusing on the design aspects.

CO4: Do research on understanding user requirement.

CO5: Perform iterative product development using prototyping technique.
